Reading the tables in this report

The following cross tabulations will assist you in understanding the association of student behaviors to alcohol and drug usage by racial identity and student grade in Section 1 and by parental education and student grade in Section 2.

The tables should be read from left to right across rows for each of the response categories “No” and “At least once”. Each answer choice (second column) will correspond across the row with each of the student grades 6th, 8th, 10th, and 12th. The average of all grades for a single answer choice is calculated in the “Total” column for each row.

It is important to note that the numbers in parenthesis for each row within each column represent the number of students who answered the question and is not indicative of the total number of survey participants. As well, the percentages are based on the number of respondents for each question and not the number of survey participants.

Example 1

For example, in Section 1, Table 1-1 it shows that 50.4% n-6,925 of students in 6th grade who selected racial identity white responded “No” to using alcohol in the past 30 days. In this same example, 42.5% n-130 of students in 6th grade who selected racial identity white responded “At least once” to using alcohol in the past 30 days.

Table 1-1: On how many occasions (if any) have you: drunk one or more drinks of an alcoholic beverage (beer, wine, or hard liquor) during the past 30 days?
