# Demographics by the Numbers

**74,647** Arkansas students in grades 6, 8, 10, & 12 contributed to the survey results.  
Source: Table 1-1

Of the students who surveyed:

Source: Table 1-3

Students who surveyed reported living with:

Source: Table 1-3

**49%** of the students were male

**51%** of the students were female

Source: Table 1-3

# Lifetime Substance Use

## Lifetime substance use is

anyone who has reported ever trying the substance in their lifetime. This population is considered more at risk for continued and future use.

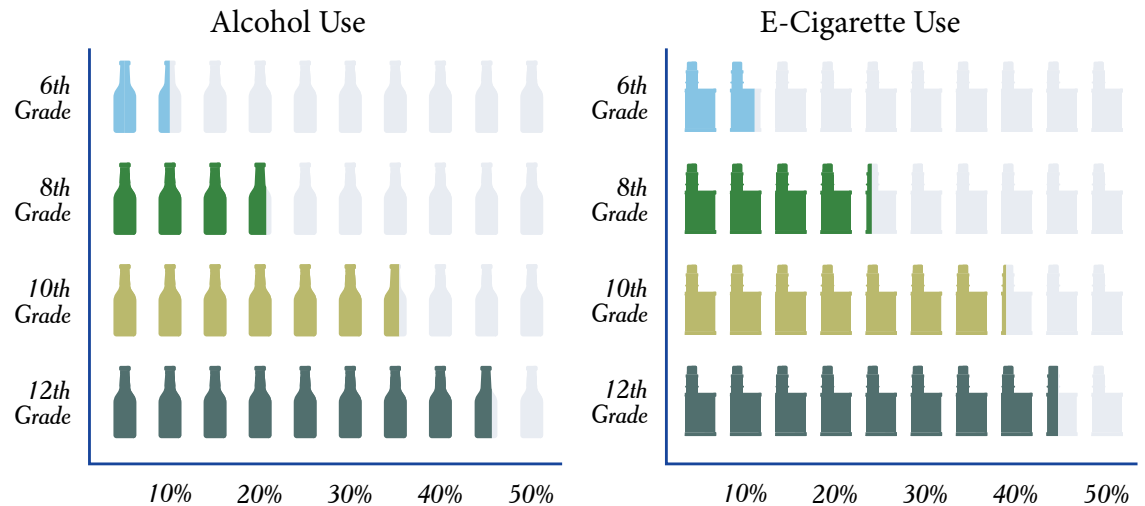

of all students surveyed have reported using e-cigarettes and/or alcohol in their lifetime.

Of all the substances reported on, e-cigarette and alcohol use had the largest changes from 2017-18 to 2018-19. Alcohol still remains the highest reported substance.

Students who have reported using alcohol and/or e-cigarettes by grade.

A closer look at students who have reported using e-cigarettes and/or alcohol by grade.

**1 out of 5**

8th graders reported use of one or both

**1 out of 3**

10th graders reported use of one or both

**Half**

of 12th graders reported use of one or both

# Differences Between Female and Male Lifetime Use

## Of the 16 drug categories surveyed in 2018,

females reported higher lifetime substance use in eight categories and males reported higher substance use in seven. Methamphetamines were the only substance which reported equal use for males and females at 0.5%

# 12/16

of the drug categories surveyed reported a decrease by males from 2017-2018.

**4X** more males use smokeless tobacco than females.

# Availability of Alcohol and Other Substances

**Most students report not using substances** but those who did were asked where they get them and where they used them. *Source: Table 2-15*

Where Students Get Alcohol

**5.5%** *From Someone Over 21*

**3.2%** *At Home With Parents Permission*

**2.4%** *From Someone Under 21*

Where Students Drink Alcohol

**10.3%** *At Someone Else's House*

**8.1%** *At Home*

**0.3%** *At School*

Students reporting it's "sort of easy" or "very easy" to get a substance.

*Source: Table 2-17*

This percentage indicates the number of students that believe using the substance would be "harmful" or "very harmful" to their health. Students in 2018 reported greater risk of harm in using several substances than in 2017. *Source: Table 2-18*

*Using E-Cigarettes Daily*

*Smoking 1-2 Packs Of Cigarettes*

*Drinking 1-2 Alcohol Beverages Daily*

*5 Or More Alcoholic Beverage Once Or Twice Per Weekend*

This page intentionally left blank.

# Section 1. Summary of Survey Methodology

## 1.1 Overview of the 2018 APNA Report

This report is divided into four sections. This first section, **Survey Methodology**, describes how the survey was conducted, who participated, and procedures that were used to ensure that valid information was collected. This section summarizes the comprehensive steps International Survey Associates/Pride Surveys took to collect, analyze, interpret and report data gathered from Arkansas students.

The second section, **Substance Use and Related Perceptions and Behaviors**, describes alcohol, tobacco and other drug (ATOD) use among Arkansas youth. This section discusses the substances and prevalence periods measured in APNA. In this section, you will find detailed APNA data on lifetime use, use in the past 30-days, and data related to a series of special topics, including: students' heavy use of ATOD; the simultaneous use of multiple substances; sources, location and ease of ATOD use; perception of harmfulness of ATOD; and associations between ATOD use and academic performance, parental influence, and depressive symptoms. When possible, these results are compared with the results of the national survey, Monitoring the Future (MTF).

The third section, **Antisocial Behaviors**, provides prevalence data on student behaviors and attitudes on topics, including: violence; disciplinary problems in school; assault; and arrest.

The fourth section, **Risk and Protective Factors for Substance Abuse and Other Youth Problem Behaviors**, provides information and APNA results on the four domains of risk and protective factors (community, family, school, and peer/individual).

## 1.2 The APNA Survey

### 1.2.1 Development of the APNA Survey

The APNA survey instrument has a rich history of collecting valid data from Arkansas students. Through the years, the instrument has evolved to respond to current trends in drug use, to allow for comparisons with national data, and to collect data on risk and protective factor indicators that assist substance use prevention and other programming designed for student well-being.

The original survey was developed in 1992 by the Center for Substance Abuse Prevention through the Social Development Research Group at the University of Washington. This instrument was modified with results of cognitive pre-testing and other statistical analyses to maximize the validity of the collected survey data. An administration protocol was developed and tested to ensure that the anonymity of the data collection process was communicated to the students resulting in improved honesty in the data set.

This questionnaire was then modified in 2002 to create the APNA survey. Modifications, including the addition of specific questions about substance use, tobacco availability, and tobacco use, allowed the APNA survey to more accurately reflect the Arkansas substance use and problem behavior climate. Throughout the years, trending substances have been added to the questionnaire (e.g., over-the-counter drugs, e-cigarettes, bath salts, prescription drugs, etc). However, the measurement of risk and protective factors, along with the prevalence of ATOD use and antisocial behaviors, has always maintained core elements to allow for year-to-year comparisons. See Appendix A for a copy of the 2018 APNA survey questionnaire.

## 1.2.2 Content and Focus of the APNA Survey

In the 2018 APNA survey, students responded to a total of 127 items (Appendix A). The questions were made available to students through a printed booklet or online survey portal. To find a complete item dictionary that lists the risk and protective factor scales and the items they contain, as well as the outcome variables and a document with tabulations for the number and percentages of collected responses for each item in the 2018 APNA survey, please visit <https://arkansas.pridesurveys.com/regions.php?year=2018>.

**Prevalence of ATOD Use and Antisocial Behavior.** The APNA survey measures the current prevalence of 16 ATOD substances. This year, the substances included: alcohol, cigarettes, smokeless tobacco, e-cigarettes, marijuana, inhalants, hallucinogens, cocaine, methamphetamines, synthetic marijuana, bath salts, ecstasy, heroin, prescription drugs, over-the-counter drugs, and alcopops. In 2012, to reflect emerging drugs and those in decline, APNA eliminated the drug categories of stimulants and sedatives but added synthetic marijuana and bath salts. In 2014, questions on e-cigarettes, e-cigars and e-hookahs were added; for 2018, no modifications were made. Students' use of these drugs are compared by grade with national data within this report, while county and regional comparisons can be found in Appendix C.

The questions that ask about substance use are similar to those used in the Monitoring the Future Survey, which allows for comparisons between state-wide and national results. The survey also asks questions about antisocial behaviors, such as carrying weapons, selling drugs, harming another student, gang involvement, and being suspended from school.

**Risk and Protective Factors.** Arkansas uses the Risk and Protective Framework to guide prevention efforts aimed at reducing youth problem behaviors. This framework, developed by J. David Hawkins, PhD, Richard F. Catalano, PhD, and their colleagues at the University of Washington, Social Development Research Group, explains the relationship between risk and protective factors and youth problem behaviors in four domains: community, family, school and individual/peer. A total of 17 risk factors and 3 protective factors were measured in the 2018 APNA survey. To find a complete list of the risk and protective factors and their corresponding scales, please see Appendix E, available at <https://arkansas.pridesurveys.com/regions.php?year=2018>. Data results and use of cut points related to national norms for risk and protective factors can be found in Section 4.

## 1.3 Administration Procedures

### 1.3.1 Overview

In August 2018, each Regional Prevention Provider (RPP) received a recruiting packet including: a school agreement form; survey fact sheet; a copy of the survey instrument; administration instructions for the district coordinator as well as the school coordinator (for both online and print versions of the instrument); teacher administration instructions; a copy of the parent notification letter; and instructions for registration (either online, email or fax.)

Regional Prevention Provider personnel visited or called school sites to encourage participation and obtain each school's participation form. Concerted efforts to gain school participation resulted in a robust 2018 dataset representative of the various student demographics throughout the state.

Participating schools received survey and administrative packets during October 2018 to allow survey administration to take place during November 2018. Each school coordinator received instructions on how to maintain student confidentiality and how to collect and return the completed surveys or, for online surveying, how to instruct students on logging into the platform to access the survey. Teachers received a script to read to students before they completed the survey. Completed print surveys were returned to the contractor, International Survey Associates (ISA), by December 1, 2018. Online survey data were collected throughout the survey period, with a December 13, 2018 cutoff date. Regional Prevention Providers followed up with phone calls to school contacts who had not returned surveys by December 13, 2018.

The University of Arkansas at Little Rock MidSOUTH Center for Prevention and Training and the Arkansas Department of Human Services Division of Aging, Adult, and Behavioral Health Services, are grateful for the cooperation and support of Arkansas' students, school administrators, and teachers, in making this survey a success.

### 1.3.2 Procedures to Protect Student and Parent Rights

A special emphasis was placed on appropriately notifying parents about the survey, their child's potential participation, the passive consent procedure, and other procedures used to keep student information anonymous and confidential. On the day of the survey, each classroom teacher / proctor administering the survey read a developmentally, age-appropriate script to students. The script described students' rights to participate or not participate in the whole survey and let students know they could skip any individual questions they did not want to answer. Students were assured multiple times that the survey was voluntary, anonymous, and confidential. They were told that no one would see their answers and that a survey could not be traced back to an individual student.

### 1.3.3. Survey Scanning Scoring Procedures

Print surveys returned to ISA were first checked to eliminate blank, damaged or unusable forms or, forms reporting students being in grades 7,9, or 11. ISA staff scanned the forms and prepared the data for analysis. For online surveys, data were collected on load-balanced virtual servers and combined with data from paper surveys before analysis. To ensure anonymity and as part of the dataset development, the ISA scoring system automatically suppresses the calculation of results when any subgroup of data contains responses from fewer than 10 students. Data from these small subgroups are, however, aggregated into reports for larger geographic areas (i.e., district, regional, and state reports).

## 1.4 2018 APNA Survey Dataset

### 1.4.1 Validity Assessment of the Individual Survey Protocols

Beyond the preliminary checks for valid surveys mentioned in Section 1.3.3, several other checks are built into the data screening process to minimize the inclusion of students who were not truthful in their responses. Invalid individual student surveys were identified using five specific criteria: 1) the student indicated that he or she was "Not Honest at All" in completing the survey; 2) the student reported an impossibly high frequency of multiple drug use; 3) the student indicated that he or she had used the non-existent drug Pegaramide; 4) there was a large age differential between grade level and the student's age as reported by the student; and 5) the student report contained logical inconsistencies between past 30-day use and lifetime use rates.

### 1.4.2. Resulting Student Dataset

In all, 82,506 students completed surveys for the 2018 APNA. Of these, and for the reasons cited in 1.3.3 and 1.4.1, a total of 7,859 surveys were removed (Table 1-1), leaving a total of 74,647 students who contributed data to the final database for analysis. Since 2002, APNA has collected survey data from a growing and stable number of Arkansas students. (Figure 1-1)

TABLE 1-1 NUMBER OF STUDENTS SURVEYED

Total Students Surveyed	82,506
Total Students Surveyed Providing Invalid Surveys	7,859
Number Valid Surveys in Grade 6	22,533
Number Valid Surveys in Grade 8	20,540
Number Valid Surveys in Grade 10	18,163
Number Valid Surveys in Grade 12	13,411
Total Number of Valid Surveys	74,647

FIGURE 1-1

## 1.5 Survey Respondents

### 1.5.1 Student Respondents by Region and County

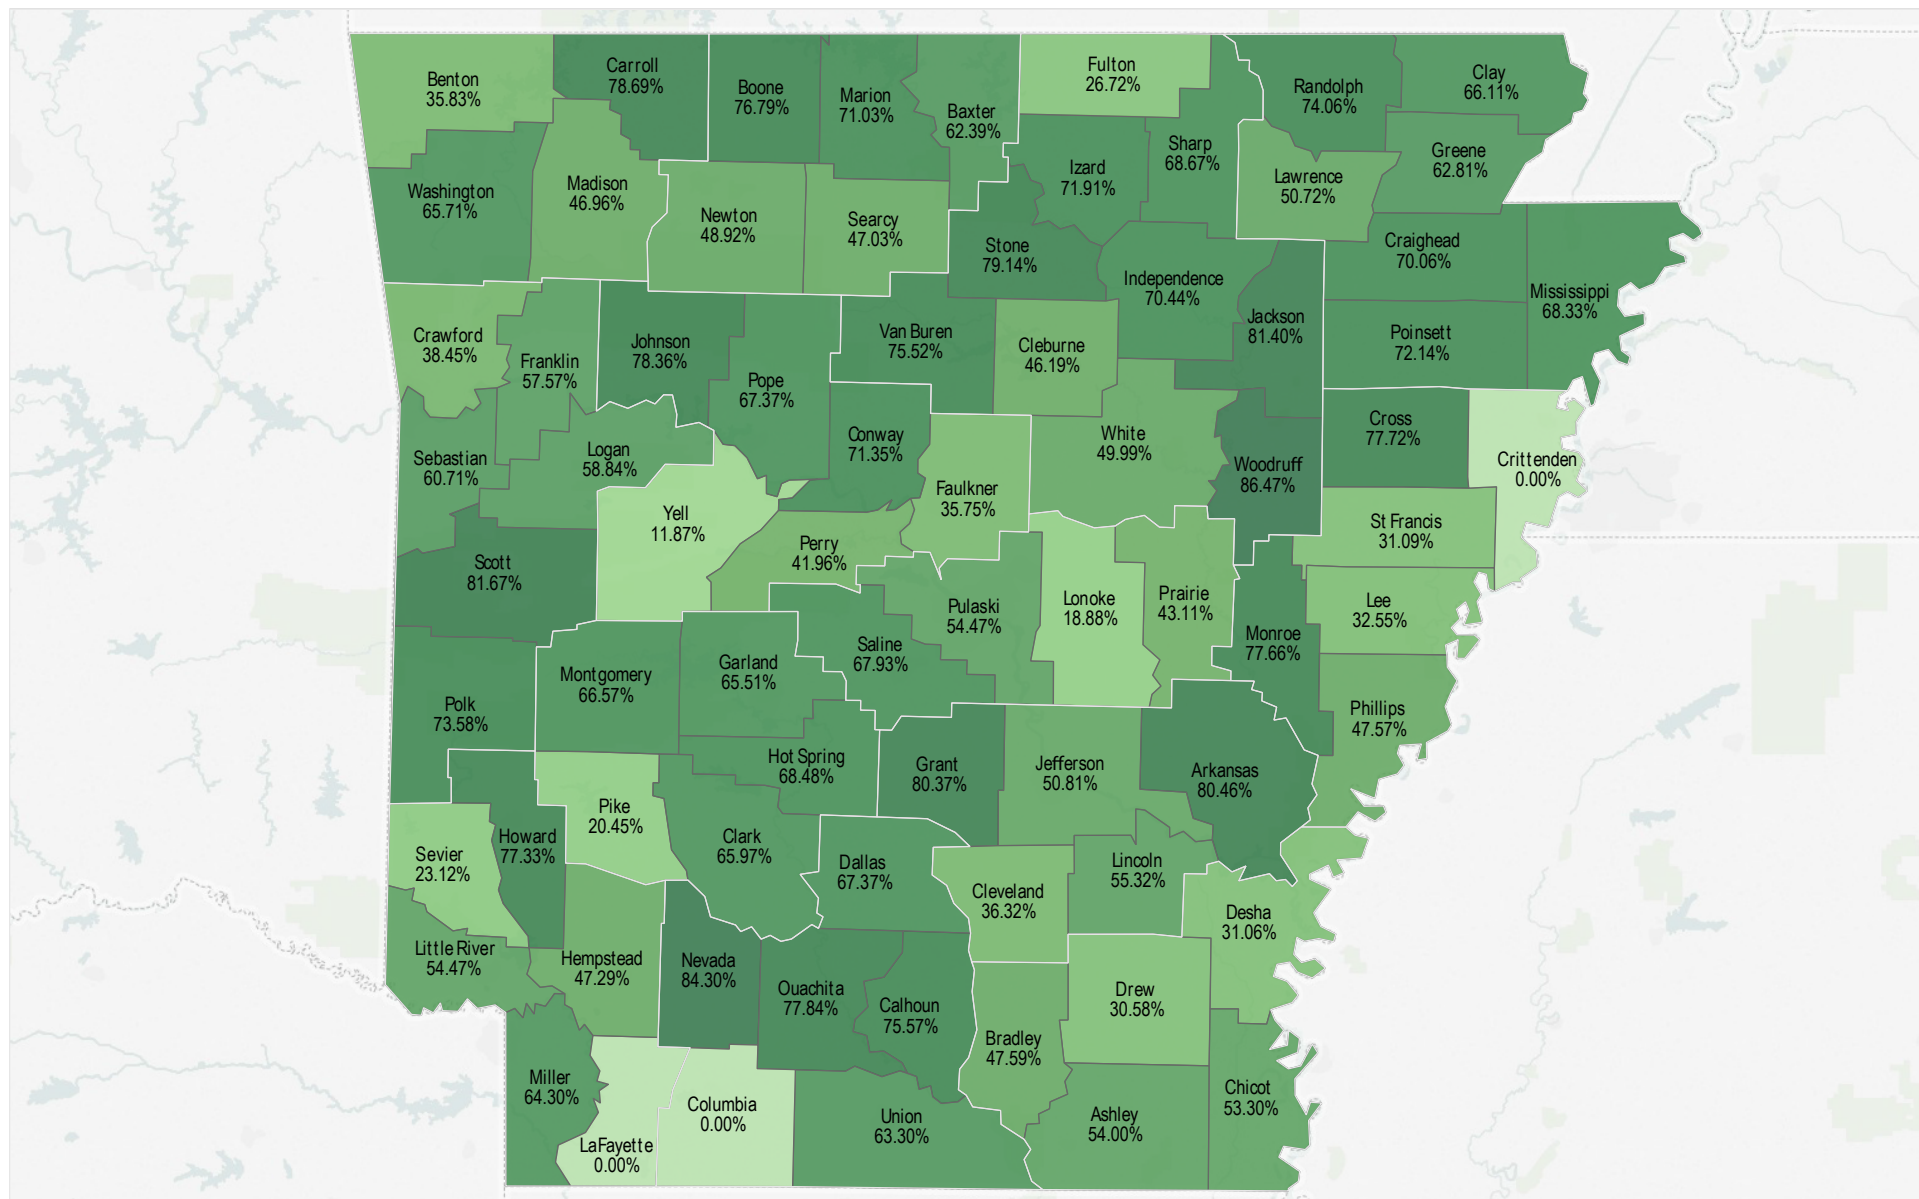

Grade level participation (n, %) by region for 2018 can be found in Table 1-2. The 13 Regional Prevention Providers provide services to the 75 counties throughout Arkansas. For 2018, 72 counties in all 13 regions participated in APNA as shown in Figure 1-2, which includes the percentage of 6th, 8th, 10th, and 12th grade students who responded in each region. (Figure 1-2)

Several tables have been prepared that supply regional- and county-level results for the 16 types of substances students reported. Rates of past 30 days and lifetime use for each of the 13 participating regions and the 72 participating counties can be found at: [arkansas.pridesurveys.com/counties.php?year=2018](http://arkansas.pridesurveys.com/counties.php?year=2018) and a Sample Profile Report for use at county or regional level can be found in Appendix C.

TABLE 1-2

Total Number and Percentage of Survey Respondents by Grade and Participating Region										
	Grade 6		Grade 8		Grade 10		Grade 12		2018 Total	
	#	%	#	%	#	%	#	%	#	%

FIGURE 1-2 % OF ARKANSAS 6, 8, 10, AND 12TH GRADE STUDENTS RESPONDING IN EACH COUNTY

## 1.5.2 Student Demographics

Characteristics of the youth who participated in the 2018 APNA survey are presented in Table 1-3, with data shown separately for grades 6, 8, 10 and 12. Figures 1-3, 1-4, 1-5 present data for race/ethnicity, gender, and family structure of student respondents. A nearly equal number of males and females took the survey across all grades (female – 51.1% and males – 48.9%). (Figure 1-4) Most respondents were White (50.7%), followed by African

American (15.6%), Hispanic (13.2%), Other (11.9%), Native American (5.2%), or Asian or Pacific Islander (3.4%). (Figure 1-3)

Regarding family structure, 49.8% lived with both of their parents, 19.8% lived in a step-family structure, 25.4% lived with a single parent, and 5% lived in “other” family structure. (Figure 1-5)

TABLE 1-3

## Section 2. Substance Use and Related Behaviors and Perceptions

This section presents findings related to student use of alcohol, tobacco and other drugs (ATOD) and explores topics including experimentation, current use, heavy use, and a variety of contextual factors (e.g., location of use, source of substances, and parental attitudes toward ATOD).

### 2.1. Measuring Substance Use Indicators

#### 2.1.1. Substances and Prevalence Periods Measured by APNA

Arkansas youth report on substance use of 16 substances shown in Table 2-1. This report carries long-term trend data, comparing this year's survey findings to the previous five years of data gathered using similar survey questions. A few substances have been added throughout the years to reflect current usage trends: prescription drugs and over-the-counter drugs (2009); synthetic marijuana and bath salts (2012); and e-cigarettes (2014).

The report also carries data on lifetime vs 30-day substance use. Lifetime use, when a student reports having used a substance at least once, is typically viewed as a measure of youth experimentation of ATOD. In contrast, past 30-day use, (ie, when students report that they have used a substance at least once in the past 30 days), is viewed as the best measure of ongoing use of ATOD. For alcohol use only, binge drinking is measured using a two-week prevalence period.

TABLE 2-1 - SUBSTANCES AND PREVALENCE PERIOD MEASURED IN APNA 2018

DRUG	PREVALENCE PERIOD
Alcohol	Lifetime, Past 30 Days, Binge in Past Two Weeks
Cigarettes	Lifetime, Past 30 Days
Smokeless Tobacco	Lifetime, Past 30 Days
E-Cigarettes	Lifetime*
Marijuana	Lifetime, Past 30 Days
Inhalants	Lifetime, Past 30 Days
Hallucinogens	Lifetime, Past 30 Days
Cocaine	Lifetime, Past 30 Days
Methamphetamines	Lifetime, Past 30 Days
Synthetic Marijuana	Lifetime, Past 30 Days
Bath Salts	Lifetime, Past 30 Days
Ecstasy	Lifetime, Past 30 Days
Heroin	Lifetime, Past 30 Days
Prescription Drugs	Lifetime, Past 30 Days
Over-The-Counter Drugs	Lifetime, Past 30 Days
Alcopops	Lifetime, Past 30 Days
Any Drug	Lifetime, Past 30 Days

\*E-Cigarettes, added in 2014, assesses only lifetime use.

### 2.1.2. Comparison Groups

The results from the 2018 APNA are compared to six sets of data. First, the five previous APNA findings (2013-2017) provide long-term trend data to inform policy makers and prevention planners. Second, the 2018 APNA data are compared with the most recent findings of the Monitoring the Future Survey (MTF), which is the national assessment of adolescent substance use, and provides data for 8<sup>th</sup>, 10<sup>th</sup>, and 12<sup>th</sup> grade students.

## 2.2. Age of Initiation

To calculate age of first use of a substance, only data from those youth who had indicated they had used the substance were analyzed and was, thus, a small subset of those included in the full dataset.

Age of first use of select substances is shown in Table 2.2 and Figure 2.1, which also show little change over the last five years on age of initiation. Again in 2018, youth, at the age of 12.5 years, began using cigarettes before any other substance. First use of alcohol is measured by two indicators: first sip and regular alcohol use, which were reported as first use at 12.8 vs 14.3, respectively. Marijuana-using youth reported that their first use was at 13.7 years and those using e-cigarettes reported first use as 14.0 years.

**TABLE 2-2**

Drug Used	Age of Initiation					
	Average Age of First Use (Of Students Who Indicated That They Had Used)					
	2013	2014	2015	2016	2017	2018
First Cigarette Use	12.4	12.5	12.5	12.5	12.5	12.5
First Marijuana Use	13.7	13.7	13.7	13.8	13.8	13.7
First Alcohol More Than Sip	12.8	12.9	12.9	12.9	12.8	12.8
First Regular Alcohol Use	14.2	14.3	14.4	14.4	14.3	14.3
First E-cigarette Use	--	14.5	14.2	13.9	13.9	14.0
NOTE: Cells containing the -- symbol indicate an area where data are not available because the question was not asked in that year's survey.						

FIGURE 2-1

## Average Age of First Substance Use (of Students Who Indicated That They Had Used)

## 2.3. Lifetime ATOD Use

### 2.3.1. Arkansas Results Compared with National Results

Lifetime use, when a student reports having used a substance at least once in his or her lifetime, is typically viewed as a measure of youth experimentation of ATOD. In 2018, students reported highest rates of lifetime use for these substances: alcohol (25.9%), e-cigarettes (25.0%), cigarettes (15.3%), alcopops (14.4%), marijuana (12.9%), and smokeless tobacco (9.2%). Rates of lifetime use have declined since 2017 reported data for these substances, except for e-cigarettes. Prevention programmers should take note of the sharp increase of e-cigarette lifetime use – from 20.9% in 2017 to 25.0% in 2018 and for the second year in a row climbing dramatically and again outpacing cigarettes in rate of use. Also of note and across the grade levels is the lifetime prevalence of alcohol, the most frequently reported substance, with rates ranging from 8.4% for 6<sup>th</sup> graders to 48.1% for 12<sup>th</sup> graders. (Table 2-4)

Table 2-3 shows how lifetime use of these substances among Arkansas 8<sup>th</sup>, 10<sup>th</sup>, and 12<sup>th</sup> grade students compared with national data from the Monitoring the Future Survey (MTF). For most substances, fewer Arkansas students reported lifetime use compared with the national sample. Yet, for smokeless tobacco and cigarettes, more Arkansas students reported lifetime use than their national counterparts.

### 2.3.2 Current Results Compared with Previous Years

Since 2013, lifetime use of most substances has declined, sometimes dramatically as shown in Table 2-4 and Figure 2-2, along with the current year data for MTF. The long-term trend has been positive since 2013, and this downward trend continues for all categories between 2017 and 2018, with the exception of e-cigarettes.

Special note: on frequency tables providing percentage of students who used ATODs, the Any Drug category includes all drugs that were included in APNA that year. For example, in 2014, the e-cigarette category was added and calculated in that category for that year forward. Thus, earlier years are slightly different and cannot be compared.

**TABLE 2-3**

Difference in Lifetime Prevalence Rates on Directly Comparable Measures between Arkansas Students and MTF 2018 Findings										
Grade Level	Alcohol	Cigarettes	Smokeless Tobacco	Marijuana	LSD/Hallucinogens	Cocaine	Inhalants	Methamphetamines	Heroin/Opiates	MDMA(Ecstasy)
8th	-1.8%	4.7%	1.7%	-5.1%	-0.7%	-0.8%	-2.2%	-0.3%	-0.3%	-1.2%
10th	-6.6%	3.9%	2.4%	-12.7%	-0.8%	-1.4%	-2.1%	-0.1%	0.5%	-1.3%
12th	-10.4%	4.4%	6.2%	-14.1%	-1.3%	-1.8%	-1.1%	0.2%	0.3%	-2.1%
Values above 0 (pink background) indicate Arkansas use above MTF value. Values below 0 (green background) indicate Arkansas use below MTF findings.

NOTE: Cells containing the -- symbol indicate an area where data are not available either because the question was not asked in that year's survey, or the MTF data are not comparable to the Arkansas data.																																							
NOTE: The Any Drug category should not be compared across the years because the types of drugs assessed changed over the years in order to add emerging drugs being used (or drop those that had become unpopular). See full explanation in Section 3.3.2.																																							

FIGURE 2-2

Lifetime ATOD Use:  
Arkansas (2013 thru 2018) Compared to National (2018)

MTF=Monitoring the Future, a national survey of 8th, 10th and 12th graders.

### 2.3.3 Lifetime Substance Use by Gender

As in the previous year, in 2018, overall female substance use in eight categories was higher than that reported by males: alcohol, marijuana, inhalants, synthetic marijuana, bath salts, prescription drugs, over-the-counter drugs, and alcopops. (Figure 2-3, Table 2-5, and Table 2-6)

As is typically found, one of the largest percentage differences between genders was for smokeless tobacco use by 12th grade boys who use smokeless tobacco almost four times the rate of girls (27.0% vs. 6.82%). Other differences are less dramatic.

Student reports of e-cigarette use revealed a high percentage of 12th grade males and females reporting lifetime use of e-cigarettes (46.5% and 42.3%, respectively). Tenth grade males and females also reported fairly similar and high levels of e-cigarette use (36.9% and 36.6%, respectively). In both cases and across grades, e-cigarette use has increased significantly.

Since 2017, total lifetime use for all substances decreased slightly or remained stable for females, with the exception of e-cigarettes. Like the overall lifetime use reported by all students, e-cigarettes increased in popularity among females from 19.5% in 2017 to 24.1% in 2018.

Males also exhibited a similar pattern with general stability or decline in use, except for e-cigarettes and inhalants. These results indicate an improvement over 2017 findings when lifetime use increased from the previous year for ecstasy, heroin, prescription drugs, and over-the-counter drugs.

While most findings, whether negative or positive, were modestly small between 2017 and 2018, data interpretation should be watchful of any of the increases found in the most recent years.

NOTE: Cells containing the -- symbol indicate an area where data are not available due to the question not being asked in that year's survey.																														
NOTE: The Any Drug category should not be compared across the years because the types of drugs assessed changed over the years in order to add emerging drugs being used (or drop those that had become unpopular). See full explanation in Section 3.3.2.																														

## 2.4. Past 30-Day ATOD Use

Students reported if they had used a substance at least once in the past 30-days. Past 30-day use is the best measure of "current" use of ATOD. The most commonly used substances for 2018 were: alcohol, marijuana, alcopops, cigarettes, smoke-less tobacco, in that order. Note that marijuana use surpassed alcopops use to become the second most used substance in 2018 while it ranked third in 2017 and alcopops second.

Past 30-day ATOD for all 16 substances is shown in Table 2-7 by grade level, with the results compared with MTF; Figure 2-4 illustrates data by grade level and MTF comparison for the five most frequently reported substances: alcohol, cigarettes, marijuana, smokeless tobacco, and alcopops.

### 2.4.1. 30-Day Use Compared with Previous Years

As shown in Table 2-7, past 30-day use of all substances has decreased or remained relatively stable since the 2017 survey, as well as from 2013.

**TABLE 2-7**

Percentage of Arkansas Respondents Who Used ATODs During The Past 30 Days by Grade																																		
Drug Used	Arkansas Grade 6						Arkansas Grade 8						MTF Grade 8	Arkansas Grade 10						MTF Grade 10	Arkansas Grade 12						MTF Grade 12	Total

NOTE: Cells containing the -- symbol indicate an area where data are not available either because the question was not asked in that year's survey, or the MTF data are not comparable to the Arkansas data.

NOTE: The Any Drug category should not be compared across the years because the types of drugs assessed changed over the years in order to add emerging drugs being used (or drop those that had become unpopular). See full explanation in Section 3.3.2.

FIGURE 2-4

### 30-Day ATOD Use: Arkansas (2013 thru 2018) Compared to National (2018)

MTF=Monitoring the Future, a national survey of 8th, 10th and 12th graders.

## 2.4.2 Arkansas Results Compared with National Results

Arkansas youth, compared with MTF respondents, have slightly higher rates of use of tobacco products (cigarettes and smokeless tobacco), as well as slightly higher usage rates of inhalants and methamphetamines among 8<sup>th</sup> and 10<sup>th</sup> graders, and heroin/opiates among 10<sup>th</sup> and 12<sup>th</sup> graders. (Table 2-8)

On the positive side, Arkansas youth reported lower levels of use on marijuana, LSD/hallucinogens, cocaine, and MDMA (ecstasy). Of note, 8% fewer Arkansas 12<sup>th</sup> graders reported marijuana use than the national sample.

**TABLE 2-8**

Difference in Past 30-Day Prevalence Rates: Arkansas Students vs. MTF 2018 Respondents										
Grade Level	Alcohol	Cigarettes	Smokeless Tobacco	Marijuana	LSD/Hallucinogens	Cocaine	Inhalants	Methamphetamines	Heroin/Opiates	MDMA(Ecstasy)
8th	-1.9%	0.7%	0.6%	-1.7%	-0.2%	-0.1%	0.8%	0.1%	0.0%	-0.2%
10th	-4.3%	1.2%	0.6%	-7.3%	0.1%	-0.3%	0.3%	0.1%	0.2%	-0.1%
12th	-7.4%	1.5%	2.7%	-7.9%	0.1%	-0.6%	0.0%	-0.1%	0.1%	0.0%
Values above 0 (pink background) indicate Arkansas use above MTF value. Values below 0 (green background) indicate Arkansas use below MTF findings.										

### 2.4.3 Past 30-Day ATOD Use by Gender

As with male and female lifetime use rates, past-month use followed similar trends. For example, percentage of smokeless tobacco users was notably higher among 12<sup>th</sup> grade males vs. females (15.1% vs. 2.3%, respectively), with 10<sup>th</sup> and 8<sup>th</sup> graders showing similar patterns, although with less of a

gap at the younger grade levels. Comparing male with female use in the 12<sup>th</sup> grade, alcohol, the most frequently reported substance, was somewhat comparable (22.7% vs. 22.9%, respectively). Drug categories where overall female substance use was higher than male substance use were: alcohol, marijuana, inhalants, bath salts, prescription drugs, over-the counter drugs, and alcopops. (Tables 2-9, 2-10 and Figure 2-5)

FIGURE 2-5

### 30-Day ATOD Use by Gender

## 2.5 Special Topics in Substance Use

Other indicators, beyond frequency of use, are important to fully understand student ATOD use. This section reports Arkansas students' reports on heavy substance use, simultaneous use of multiple substances (2.5.2), sources and location of alcohol use (2.5.3); ease of obtaining substances (2.5.4), perceived harmfulness (2.5.5), academic performance and substance use (2.5.6), parental influence on substance use (2.5.7) and the association of depressive symptoms and substance use (2.5.8).

### 2.5.1 Heavy Alcohol, Cigarette, and Marijuana Use

Alcohol, cigarettes, and marijuana are the substances that all students, in Arkansas and across the nation, are most likely to use heavily.

For Arkansas students overall, binge drinking appears to be the largest heavy use problem. Binge drinking is unique in that the measured prevalence period is the past two weeks. The students are asked, "Think back over the last two weeks. How many times have you had five or more alcoholic drinks in a row?" Table 2-11 shows that 5.5% of youth reported binge drinking. Compared with 2013 findings, binge drinking among Arkansas youth has declined by 2.3%.

Heavy use of tobacco was measured by the question, "How frequently have you smoked cigarettes during the past 30 days?" Heavy cigarette use was defined as about one-half pack per day or more. Table 2-11 shows that heavy tobacco use was relatively low at .3% of all Arkansas students.

Heavy marijuana use was measured by the question: "During the last month, about how many marijuana cigarettes, or the equivalent, did you smoke a day, on the average?" Heavy use was defined as reporting use of one or more marijuana cigarettes a day. The findings (Table 2-11) show a prevalence rate of 3.5% for all Arkansas students, with 7.5% of 12th graders reporting heavy marijuana use, a decrease from 8.1% in 2017.

Male-female differences were also observed for heavy substance use. Figure 2-6 and Tables 2-12 and 2-13 show that, overall males report heavier use for cigarettes and marijuana; however, in 2018, females' heavy use of alcohol again surpassed that of males (6.0% vs. 5.1%, respectively) overall. Females in grades 8 and 10 reported higher rates of binge drinking compared with their male counterparts. For heavy marijuana use, males, in general, reported slightly higher usage rates (3.8% vs. 3.2% for females); this pattern persisted across the grade levels.

## 2.5.2 Simultaneous Use of Multiple Substances

The percentage of youth who used various substances individually and in combination with other substances is shown in Table 2-14. “Any Substance” is defined as using one or more of the 16 substances measured by the survey. The data shown are all based on past 30-day use. As is typical, the prevalence rates increase with grade level. The combined grade prevalence rate is also shown. For comparison, the overall percentage of students using alcohol, cigarettes, tobacco, smokeless tobacco, and marijuana are also shown, along with specific combinations of substances.

A significant number of students reported using two or more and three or more substances. Across all grades, 7.1% of Arkansas youth have used two or more substances in the past 30 days (down from 8.3% in 2017), and 3.2% of students (vs. 4.0% in 2017) have used three or more substances. The most common combinations are that of alcohol and tobacco (3.1%), alcohol and marijuana (2.1%) and alcohol and any other drug (4.2%). Use of all three substances – alcohol, tobacco, and marijuana – within the past 30 days was reported by 1.6% of all students. (Table 2-14)

**TABLE 2-14**

Percentage Using Multiple Drugs in the Past 30 Days (2018)

### 2.5.3 Sources of Alcohol and Location of Alcohol Use

Tables 2-15 and 2-16 and Figures 2-7 and 2-8 provide data related to sources and places of alcohol use for Arkansas youth, if they used at all. While youth using alcohol may have obtained alcohol in various ways and used alcohol in various locations, they were asked to select the one best answer that described their typical method for obtaining alcohol and the place where they usually drank alcohol.

Across all grades, the most prevalent source of alcohol was from someone aged 21 years or older. This source becomes increasingly used as youth progress from the 6th grade (.6%) to the 12th grade (16.1%). The next most prevalent sources were “other” (3.8%), getting it from home with parent’s permission (3.2%), and getting alcohol from someone under age 21 (2.4%). As might be expected, the percentage of students reporting each of these sources increases with grade level.

Encouragingly, buying alcohol—with or without a fake ID—was rare. Only .1% of 8th graders, .2% of 10th graders, and .4% of 12th graders indicated that they obtained alcohol by buying it with a fake ID and .7 % of 12th graders said they bought alcohol without a fake ID. (Table 2-15)

When consuming alcohol, students indicated that they most often drank alcohol at someone else’s house (10.3%). Students became more likely to drink at someone else’s house as they advance thru grades 6, 8, 10 and 12 (1.5%, 6.4%, 15.6%, and 23.6%, respectively). The second most popular place where youth in these grades drank was at their home (3.0%, 7.3%, 11.4%, and 13.4%, respectively). The likelihood of drinking in an open area, a sporting event or concert, a restaurant, bar, or club, a hotel or motel, in a car, and at school were not common locations for consuming alcohol, yet all increased with grade level. This pattern of use is similar to last year. (Table 2-16)

**TABLE 2-15**

Percentage of Students Indicating Usual Source of Obtaining Alcohol					
	Grade 6	Grade 8	Grade 10	Grade 12	Total
	2018	2018	2018	2018	2018
Did not drink	95.0	85.1	71.1	60.4	80.2
Bought it with a fake ID	0.1	0.1	0.2	0.4	0.2

FIGURE 2-7

## Students' Sources of Obtaining Alcohol (2018)

FIGURE 2-8

## Usual Place of Student Alcohol Use (2018)

A separate question on the survey asked students about whether they had been drunk or high at school in the past year. This is a hybrid question in the sense that it is asking about location (i.e., school setting) and the level of use (being drunk or high). Because of the format of the specific question, the reported percentages for this behavior are based on a past year prevalence period, which makes them more difficult to directly compare with other ATOD questions. Figure 2-9 illustrates trends per grade since 2013 in student reports of being drunk or high at school. Percentage rates have remained relatively the same over this six-year period.

## 2.5.4 Ease of Obtaining Substances

Arkansas students reported on how easy they thought it was to get cigarettes, alcohol, marijuana, cocaine, and e-cigarettes. Table 2-17 provides percent-age of students who reported certain substances to be “sort of easy” or “very easy.” Of note, more than half of 12th graders thought cigarettes, alcoholic beverages and marijuana (58.6%, 56.3% and 53.9%, respectively) were easily obtained while less than one in five (17.9%) thought cocaine was easy to get and more than half (57.4%) thought e-cigarettes were easy to get. In contrast, fewer 6th graders thought the substances were easy to get: 11.4% for cigarettes; 13.1% for alcoholic beverages; 5.2% for marijuana; 2.9% for cocaine; and 9.0% for e-cigarettes. Compared with Monitoring the Future respondents, fewer Arkansas students reported substances as “sort of easy” or “very easy” to get across all grades (8,10,12) and substances.

**TABLE 2-17**

Percentage of Arkansas and Monitoring the Future Respondents Who Perceive the Five Substances as “Sort of Easy” or “Very Easy” to Get

FIGURE 2-9

### Been Drunk or High at School by Grade Level

## 2.5.5 Perceived Harmfulness

When youth perceive that a substance is harmful, they are less likely to use it. The APNA survey asked youth, “How much do you think people risk harming themselves (physically or in other ways) if they”: smoked cigarettes heavily, tried marijuana, smoked marijuana regularly, drank alcohol regularly, engaged in binge drinking regularly, or used e-cigarettes, e-cigars or hookahs. Students could respond that these substances placed them at “no risk,” “slight risk,” “moderate risk,” or “great risk.” The results for “great risk” are presented in Table 2-18 and Figures 2-10, 2-11 and 2-12.

These rates of perception of “great risk” have increased since 2017; more students are reporting that substance use is harmful. For example, in 2017, 33.8% of students thought using e-cigarettes placed people at great risk; in

2018, 35.2% reported the same. Likewise, drinking one or two alcoholic beverages nearly every day was perceived as great risk by 38.7% in 2017 vs. 40.6% in 2018. In all, the 2018 rates of perceived harm are reverting to the 2016 level, which is a positive indicator that more students are aware of the harmfulness of the substances.

Compared with the national MTF data, fewer Arkansas students perceived risk for some substances. For example, in each grade, fewer Arkansas students compared with the MTF students thought smoking marijuana regularly placed people at “great risk” (grade 8: 41.3% vs. 52.9%; grade 10: 28.9% vs. 38.1%; grade 12: 23.4% vs. 26.7%, respectively). However, for “drinking one or two alcoholic beverages nearly every day,” more Arkansas students in each grade level reported “great risk” than the national sample. (Figures 2-13 and 2-14)

## 2.5.6 Academic Performance and Substance Use

A strong correlation between substance use and academic performance was found in 2018 (Table 2-19 and Figure 2-15). Of the youth who reported getting better grades, fewer have tried ATODs and fewer are currently using ATODs than those who report poorer grades. Compared with students earning grades of A, twice as many failing youth (earning grades of D or F) have used alcohol, nearly five times as many have used cigarettes and marijuana, and three times as many have used any drug in the past 30 days.

It is likely that the youth earning As are more invested in the education process and more bonded to school than their peers receiving poorer grades. One of the challenges for prevention programs is to develop methods of keeping all youth interested in learning and feeling attached to school.

TABLE 2-19

Percentage Using ATODs by Academic Performance (2018)				
Drugs Used	Academic Performance			
	Mostly A's	Mostly B's	Mostly C's	Mostly D's or F's
Alcohol Lifetime	22.2	28.0	31.9	32.7
Alcohol 30 Days	7.9	10.4	13.1	13.8
Marijuana Lifetime	8.5	14.4	20.7	25.6
Marijuana 30 Days	3.3	6.6	11.2	15.2
Cigarettes Lifetime	9.7	17.2	24.3	30.4
Cigarettes 30 Days	2.0	4.4	7.6	11.4
Any Drug Lifetime	15.1	20.5	25.9	31.7
Any Drug 30 Days	6.6	10.3	15.0	19.9

FIGURE 2-15

## Percentage Using ATODs by Academic Performance (2018)

### 2.5.7 Parental Influence on Student ATOD Use

To determine how parents influence a student's behavior, students were asked to report on "how wrong do your parents feel it would be for you to smoke marijuana?" Students also provided parents' education level. For both items, data analysis associated a student's ATOD use with perception of parental acceptability of ATOD use and level of parental education.

Of students who said that their parents felt it would be very wrong if the student smoked marijuana, only 2.8% reported marijuana use in the past 30 days and 7.7 reported lifetime use. In contrast, of students who perceived that their parents felt it was "not wrong at all" to smoke marijuana, 46% reported marijuana use in the past 30 days and 62.8% reported lifetime use. (Table 2-20 and Figure 2-16)

Fewer students whose parents had the highest level of education (completed college or graduate school), compared with students whose parents had less education, reported lifetime or 30-day use for all categories. (Table 2-21 and Figure 2-17)

TABLE 2-20

Use in Relation to Perceived Parental Acceptability of Marijuana Use (2018)		
How wrong do your parents feel it would be for you to smoke marijuana?	Has Used Marijuana	
	At Least Once in Lifetime	At Least Once in Past 30 Days
Very Wrong	7.7	2.8
Wrong	33.5	15.0
A Little Bit Wrong	54.0	30.4
Not Wrong At All	62.8	46.0
NOTE: Cells containing the -- symbol indicate an area where data are not available due to the question not being asked in that year's survey.

## 2.5.8 Depressive Symptoms and Substance Use

Youth who reported depressive symptoms were more likely to report substance use than those who had a more positive outlook on life. The four items were: 1) Sometimes I think that life is not worth it; 2) At times I think I am no good at all; 3) All in all, I am inclined to think that I am a failure; and 4) In the past year, have you felt depressed or sad MOST days, even if you felt okay sometimes? The questions were scored on a scale of 1 to 4 (NO!, no, yes, YES!). The survey respondents were divided into three groups. Those who scored a mean of greater than 3.75 were categorized as depressed. These youth marked “YES!” to all four items or marked “yes” to one item and “YES!” to three. Those who marked “NO!” to all four items were categorized as optimistic; a middle category was assigned to all remaining respondents. According to this methodology, the APNA findings categorize 5,544 (7.8%) students as depressed, 13,777 (19.4%) youth as optimistic, and 51,577 (72.8%) youth in the middle category. (Table 2-22 and Figure 2-18)

A strong link exists between youth who reported depressive symptoms and ATOD use. When compared with the optimistic group’s past 30 day use, nearly six times more depressed youth used cigarettes (2.1 vs. 11.7%, respectively), almost eight times more use marijuana (2.7% vs. 16.0%, respectively), and six times more use any (4.0% vs. 25.8%, respectively).

The ATOD use rates of the youth in the middle group were closer to the rates of the optimistic group than they were to the depressed youth group. For example, for past 30-day alcohol use, prevalence rates were 5.6%, 9.5%, 22.2% for the optimistic, middle and depressed groups, respectively. In sum, students with a positive outlook on life (even with some depressive symptoms) used fewer substances than students with a high level of depressive symptoms. (Table 2-22 and Figure 2-18)

TABLE 2-22

Percentage Using ATODs and Level of Depressive Symptoms (2018)			
	Level of Depressive Symptoms		
	Optimistic	Middle	Depressed
Number of Youth	13,777	51,577	5,544
Alcohol Lifetime	13.7	26.7	49.6
Alcohol 30 Days	5.6	9.5	22.2
Marijuana Lifetime	6.0	12.9	30.2
Marijuana 30 Days	2.7	5.9	16.0
Cigarettes Lifetime	7.7	15.2	34.6
Cigarettes 30 Days	2.1	3.7	11.7
Any Drug Lifetime	8.7	19.3	43.3
Any Drug 30 Days	4.0	9.4	25.8

FIGURE 2-18

## Percentage Using ATODs and Level of Depressive Symptoms (2018)

## Section 3. Antisocial Behaviors

### 3.1 Measuring Antisocial Behaviors

In the APNA survey, antisocial behavior is measured through two different sets of questions. First, a series of questions asks students whether they engaged in six specific behaviors in the past year (carrying a handgun, taking a handgun to school, selling illegal drugs, vehicle theft, attacking someone with the intention of seriously hurting them, or having been drunk or high at school); and, also for the past year, whether they were suspended from school, arrested, or belonged to a gang. Second, in another series of questions, students were asked the age at which the following events or behaviors first happened: school suspension, arrest, carrying a handgun, attacking someone

with the intent of seriously hurting them, and gang involvement. The age of initiation question allows for lifetime prevalence to be determined for these specific behaviors.

Table 3-1 summarizes the prevalence of the antisocial behavior variables measured for the past year. Tables 3-2 and 3-3 and Figures 3-1 and 3-2 provide a breakdown of male/ female responses to these questions.

In the following subsections, specific antisocial behaviors are discussed in greater detail, and age of initiation questions are presented in Section 3.3.

FIGURE 3-1

# Antisocial Behaviors Male - Female

FIGURE 3-2

### Antisocial Behaviors Male - Female

## 3.2 Antisocial Behavior During Past Year

Fluctuations of prevalence rates between 2013 and 2018 are worth noting. All variables, except for one, have seen significant or modest reduction in prevalence between 2013 and 2018. Most significant were: attacked someone to harm (10.3% vs. 6.8%); drunk or high at school (7.9% vs. 6.1%); been arrested (3.5% vs. 2.2%); belonged to a gang (4.9% vs. 4.2%). As in 2017, “carried a handgun” continued to be reported at a higher rate in 2018 vs. 2013 (5.0% vs. 4.7%) but had decreased from the previous year’s report by 0.3% of students. Of note, the only elevated prevalence from the previous year was for “suspended from school” where 11.1% of students in 2018 reported this behavior compared with 10.3% in 2017. (Table 3-1)

### 3.2.1 Carried a Handgun/Taken a Handgun to School

Youth who carry handguns is a serious concern for communities, schools, and families. The APNA survey has two questions about behaviors related to handguns as shown in Table 3-1. Most of the responses show a low percentage of students who carry handguns or take them to school. For example, .4% of the youth surveyed reported taking a handgun to school in the past 12 months, and 5.0% of youth surveyed reported carrying a handgun in the past 12 months. Taking a handgun to school is, under any circumstances, an extremely deviant behavior. The extremely low percentage of youth reporting this behavior is encouraging. In fact, with the overall prevalence measurement this low, this is well below the range of the survey to reliably detect the true prevalence.

Both survey questions also show grade-related effects. When looking at the results by grade, 10th and 12th graders reported the highest rate of taking a

handgun to school in the past year (.4% and .6%, respectively) and carrying a handgun in the past year (5.1% and 5.3%, respectively). Eighth graders reported taking a gun to school and carrying a hand gun in the past year at the rates of .4% and 5.3%, respectively.

### 3.2.2 Sold Illegal Drugs

Students were asked about whether they had sold illegal drugs by answering the question “How many times in the past year (12 months) have you sold illegal drugs?” Overall, 2.1% of Arkansas students reported that they had sold illegal drugs in the past year. As is typical, the percentage reporting that they had sold drugs increased with grade level, from .3% in the 6th grade to 4.6% in the 12th grade. For both 10th and 12th graders, fewer reported selling illegal drugs in 2018 than in 2017 (Grade 10: 3.4% vs. 4.2% and Grade 12: 4.6% vs. 5.3%, respectively).

### 3.2.3 Stolen a Vehicle

Students were asked about whether they had stolen a vehicle, by answering the question “How many times in the past year (12 months) have you stolen or tried to steal a motor vehicle such as a car or motorcycle?” Overall, very few students, 1.2%, reported that they had stolen a vehicle in the past year. There is only a slight rise in the prevalence of this behavior with age. These results are mostly unchanged since 2013.

### 3.2.4 Attacking Someone to Harm

The 2018 data reveal that 6.8% of the youth in Arkansas have attacked someone with the idea of seriously hurting them in the past 12 months. This prevalence rate is significantly lower than in 2013 (10.3%).

When looking at the results by grade, it appears that 8th and 10th graders have the most problems with violent behavior and attitudes. Eighth graders reported the highest rates of attacking someone in the past 12 months (8.1%), followed by 10th graders (6.9%).

### 3.2.5 Been Drunk or High at School

This year's student reports continued a downward trend for being drunk or high at school. Compared with 2013 reports, fewer students reported this behavior in 2018 (7.9% vs. 6.1%, respectively). Of note, slight increases were seen between 2017 and 2018 for both 6th and 8th graders: Grade 6, .8% vs. .9%, respectively; Grade 8, 4.4% vs. 5.2%, respectively.

### 3.2.6 Suspended from School

Overall, 11.1% of students reported that they had been suspended from school. Students in 8th and 10th grades were most likely to report suspension, with 8th graders reporting the highest rate of suspension at 13.4%, an increase over 2017 reports of 12.3% reporting suspension.

### 3.2.7 Been Arrested

Arrest, although not a student behavior, is a consequence of problem behavior. Students were asked whether they had been arrested in the past 12 months. Across all surveyed grade levels, 2.2% of Arkansas students reported that they were arrested in the past year. Arrest prevalence was at the highest rate for 10th and 12th graders (3.1%, 2.8%, respectively), followed by 8th graders (2.3%), and 6th graders (1.0%).

### 3.2.8 Gang Involvement

Overall, 4.2% of Arkansas students reported that they belonged to a gang sometime in their lifetime. Students' understanding of this question varies depending on their definition of a gang, but it is the ongoing trend data that make this question useful. The 4.2% prevalence rate compares with a 4.3% prevalence in 2017, and a 4.9% prevalence in 2013.

By grade level, the rates for 6th, 8th, 10th, and 12th grade students were 4%, 4.4%, 4.2%, 4%, respectively.

TABLE 3-4

Age of Initiation of AntiSocial Behavior						
Antisocial Behavior	Average Age of First AntiSocial Behavior (Of Students Who Reported Such Behaviors)					
	2013	2014	2015	2016	2017	2018
Carried a handgun	12.1	12.1	12.1	12.2	12.1	12.1
Suspended from school	11.8	11.8	11.8	11.8	11.8	11.8
Been arrested	13.4	13.3	13.3	13.2	13.2	13.1
Gang involvement	12.2	12.1	12.2	12.2	12.2	12.2

### 3.3 Age of Initiation of Antisocial Behaviors

Age of initiation questions ask students about their age when they first engaged in a specific behavior or about their age when a specific event (e.g., school suspension) first occurred. Table 3-4 and Figure 3-3 show results from the age of initiation questions. These data are based only on students who reported that the events had happened.

#### 3.3.1 Carried a Handgun

The average age that Arkansas students started carrying a handgun was 12.1 years. This value is similar to previous years.

#### 3.3.2 Suspended from School

The average age for first being suspended from school was 11.8 and is identical to 2013 thru 2017 results.

#### 3.3.3 Been Arrested

The average age for arrest for Arkansas students was 13.1, which is slightly lower than results from 2013 - 2017.

#### 3.3.4 Gang Involvement

As with other behaviors addressed in this panel, 2018 results were similar to previous years for gang involvement, with students engaging in this behavior starting, on average, at age 12.2 years.

FIGURE 3-3

## Average Age of First Incidence of Antisocial Behavior (of Students Who Indicated That They Had Engaged in Behavior)

## Section 4. Risk and Protective Factors

### 4.1 The Risk and Protective Factor Model

The Arkansas Prevention Needs Assessment (APNA) Survey is grounded in the risk and protective factor model of substance abuse prevention. Just as medical research discovered the risk and protective factors for heart disease, diabetes, and other diseases, social scientists defined a set of risk and protective factors for problem behaviors including substance abuse, delinquency, violence, teen pregnancy, school dropout, and more.

In the 1990s, well-known researchers J. David Hawkins, PhD, Richard F. Catalano, PhD, and their colleagues at the University of Washington identified risk and protective factors in four domains: 1) the community; 2) the family; 3) the school; and 4) peer/individual. Risk factors predict increased likelihood of drug use, delinquency, school dropout, teen pregnancy, and violent behavior among youth. For example, Hawkins and Catalano found that children who live in families with high levels of conflict are more likely to become involved in problem behaviors such as delinquency and drug use than children who live in families with low levels of family conflict. Protective factors exert a positive influence or buffer against the negative influence of risk, thus reducing the likelihood that adolescents will engage in problem behaviors. Protective factors identified through research by Hawkins and Catalano include: bonding to family, school, community and peers; healthy beliefs and clear standards for behavior; and individual characteristics. For bonding to serve as a protective influence, it must occur through involvement with peers and adults who communicate healthy values and set clear standards for behavior.

Research on risk and protective factors has important implications for prevention efforts. The premise of the risk and protective factor model is that, in order to promote positive youth development and prevent problem behaviors, it is necessary to address those factors that predict the problem behaviors. By

measuring risk and protective factors in a population, prevention programs can be implemented that will reduce the elevated risk factors and increase the protective factors. For example, if academic failure is identified as an elevated risk factor in a community, then mentoring, tutoring, and increased opportunities and rewards for classroom participation can be provided to improve academic performance.

A list of the risk and protective factors that have been shown to be related to youth problem behaviors and their link to the APNA survey can be found in Appendix E (<https://arkansas.pridesurveys.com/regions.php?year=2018>).

#### 4.1.1. Key Findings on Risk and Protective Factors Reported by Arkansas Students

In comparison with the national norm, risk factor scores for Arkansas youth in all four domains are generally lower, which is a good thing. Risk factors that were elevated for Arkansas students were in the Peer/Individual domain: Perceived Risk of Drug Use among 8th, 10th and 12th graders; Rewards for Antisocial Behaviors among 12th graders; and Depression among 10th and 12th graders, with 8th graders very close to the norm. On all other risk factors, Arkansas students had notably lower risk scores.

#### RISK FACTORS — KEY FINDINGS

In general, the grade level changes were as expected. For many risk factor scales, the levels of risk most often increased with increasing age and peak in the 10th or 12th grades. For example, in the Rewards for Antisocial Behavior (Peer/Individual Domain) risk scale, 25.1% of 6th graders, 37.2% of 8th graders, 39.6% of 10th graders, and 48.8% of 12th graders were at risk. Another example is Perceived Availability of Drugs (Community Domain). In

the 6th grade only 13.8% of students report this risk factor, but this increases to 16.8%, 19.7% and 23.5% in the 8th, 10th and 12th grades, respectively.

However, for many other risk factors, there is only limited progression with age, if any. For example, Poor Family Management risk factor declines from 6th to 12th grade among Arkansas students, from a high of 32.8% of 6th graders to a low of 19.4% for 12th graders.

Of note, results from the 2018 APNA show that many risk areas have increased since the 2017 results across the grade levels. The following domains and risk factors were reported with increased frequency for each grade level.

**Family:** parent attitudes favor antisocial behavior

**School:** academic failure, low commitment to school

**Peer / Individual:** early initiation of antisocial behavior; interaction with antisocial peers; depression; gang involvement

#### PROTECTIVE FACTORS — KEY FINDINGS

In general, Arkansas students show a high number of protective factors, and they compare favorably with the national norm. Arkansas students are most elevated on Religiosity (up to 75.3% for grade 12) (Table 4-4), and School Opportunities for Prosocial Involvement (>60% for grades 8, 10 and 12) (Table 4-3), and Rewards for Prosocial Involvement (55.1% for grade 10) (Table 4-3). Although students' protective factors are elevated from national norms, it should be noted that the Religiosity protective factor declined across all grades, except Grade 6, between 2017 and 2018; and, the Prosocial Involvement protective factors (both school opportunities and rewards) declined between 2017 and 2018 for all grades.

Details on these and other results can be found in this section, which is organized according to the four domains: community, family, school, and peer/

individual. For each domain, risk and protective factor results for Arkansas students are presented by grade. Risk and protective factor charts illustrate Arkansas students' risk and protection compared with students from a seven-state sample in the United States.

#### HOW TO READ THE RISK AND PROTECTIVE FACTOR CHARTS IN THIS SECTION

Two components of the risk and protective factor charts are key to understanding the information that the charts contain: 1) the cut points for the risk and protective factor scales; and 2) the dashed lines that indicate a “national” value.

#### CUT POINTS

For risk factors, having an elevated risk factor increases the adolescent's probability of engaging in a problem behavior. Conversely, for a protective factor, having an elevated protective factor reduces the adolescent's probability of engaging in a problem behavior. Before the percentage of youth who are elevated on either risk or protective factors can be calculated, a scale value (traditionally called a cut point) was needed to define the point at which the risk or protective factor could meaningfully affect the probability of the negative behavior occurring.

The APNA survey instrument was designed to assess adolescent substance use, antisocial behavior and the risk and protective factors that predict these adolescent problem behaviors. During the instrument development process, risk and protective factor-based surveys were given to more than 200,000 youth nationwide. Because of this, it was possible to identify two groups of youth, one that was more at risk for problem behaviors and another group that was less at risk, based on their risk and protective factor scores. For each risk and protective factor, a cut-point value was then determined that best differen-

tiated between youth involved in problem behaviors and those who were not. Various outcomes were used for determining the cut-point values, including ATOD use, a variety of antisocial behaviors, and the students' self-report of academic grades (the more at-risk group received "D" and "F" grades, the less at-risk group received "A" and "B" grades).

Since the cut points have been proven to be stable, the percentage of youth above the cut point on a scale (at-risk) can be consistently measured and used to evaluate the progress of prevention programs over time. For example, if the percentage of youth at-risk for family conflict prior to implementing a community-wide family/parenting program was 60% and then decreased to 50% one year after the program was implemented, the program may be viewed as helping to reduce family conflict.

#### DASHED LINE

Levels of risk and protection in your community also can be compared with a national sample. The dashed line on each risk and protective factor chart represents the percentage of youth at-risk or with protection for the seven-state sample of 200,000 students upon which the cut points were established. The seven states included in the norm group were: Colorado, Illinois, Kansas, Maine, Oregon, Utah, and Washington. All the states have a mix of urban and rural students.

#### 4.1.2 Community Domain Risk and Protective Factors

Definitions of all community domain risk factors, as well as scale scores for the community domains assessed in APNA are provided in this section and in Tables 4-1 and Figure 4-1.

TABLE 4-1

Community Domain Risk Factor Scores

FIGURE 4-1

## Risk Factors: Community Domain (2018)

## COMMUNITY RISK FACTORS

**Low Neighborhood Attachment and Community Disorganization.** Higher rates of drug problems, juvenile delinquency, and violence occur in communities or neighborhoods where people have little attachment to the community, where the rates of vandalism are high, and where there is low surveillance of public places. These conditions are not limited to low-income neighborhoods; they can also be found in wealthier neighborhoods. Lower rates of voter participation and parental involvement in schools also indicate lower attachment to the community. The 2018 APNA results indicated that Arkansas youth in grades 6, 8, 10, 12 are at low risk, as scores are well below the cut point for risk (23.5, 23.2, 30.1, and 31.5, respectively, with a cut point of 45).

**Transitions and Mobility.** Even normal school transitions predict increases in problem behaviors. When children move from elementary school to middle school, or from middle school to high school, increases in the rates of drug use, school misbehavior, and delinquency are measurable.

Communities with high rates of mobility appear to be linked to an increased risk of drug use and crime problems. The more often people in a community move, the greater the risk of both criminal behavior and drug-related problems in families. The 2018 APNA results indicated that Arkansas youth in grades 6, 8, 10, 12 are close to cut point for risk, with 10th graders at the cut point of 45, followed by 8th graders at 42.4, 12th graders at 40, and 6th graders at 38.2.

**Community Laws and Norms Favorable to Drug Use, Firearms, and Crime.** Community norms—the attitudes and policies a community holds about drug use and crime—are communicated in a variety of ways: through laws and written policies, through informal social practices, and through the expectations parents and other community members have of young people. When laws and community standards are favorable toward drug use or crime, or even if they are just unclear, youth are at higher risk. The 2018 APNA results indicated that Arkansas youth in grades 6, 8, 10, 12 are below the cut point of 45 but higher than perceived availability of drugs and firearms.

**Perceived Availability of Drugs.** As drugs become more available in a community, there is a higher risk that young people will abuse drugs in that community. Perceived availability of drugs is also associated with increased risk of ATOD use. For example, in schools where youth just think drugs are more available, a higher rate of drug use occurs. The APNA 2018 results indicated that Arkansas youth in grades 6, 8, 10, 12 are at low risk, as scores are well below the cut point for risk (13.8, 16.8, 19.7, and 23.5, respectively, with a cut point of 45).

**Availability of Firearms.** Firearm availability is directly linked to the probability of serious assault, suicide, and homicide. If a gun is present in the home, it is much more likely to be used against a relative or friend than an intruder or stranger. Given the lethality of firearms and the increased likelihood of conflict escalating into homicide when guns are present, firearm availability is included as a risk factor. The 2018 APNA results indicated that Arkansas youth in grades 6, 8, 10, 12 are at low risk, as scores are well below the cut point for risk (18.3, 29.8, 22.1, and 26.3, respectively, with a cut point of 45).

OTHER COMMUNITY DOMAIN RISK AND PROTECTIVE FACTORS (NOT SURVEYED BY APNA)

**Risk Factor: Extreme Economic Deprivation.** Children who live in neighborhoods characterized by extreme poverty are more likely to develop problems with delinquency, violence, teen pregnancy, and school dropout.

**Risk Factor: Media Portrayals of Violence.** Exposure to violence in the media appears to have an impact on children in several ways: 1) children learn violent behavior from watching actors model that behavior; 2) they learn violent problem-solving strategies; and 3) media portrayals of violence appear to alter children's attitudes and sensitivity to violence.

### **Protective Factor: Community Opportunities for Prosocial Involvement and Community Rewards for Prosocial Involvement.**

Community Opportunities for Prosocial Involvement measures student perceptions on the ways that they can become positively involved in their community. For example, youth sports teams, 4-H clubs, police Explorer organizations, and community service clubs are all examples of avenues through which youth could engage in prosocial community activity. Community Rewards for Prosocial Involvement measures the likelihood that youth feel that community members (e.g., neighbors, family friends) recognize, support, and encourage youth to be positively involved in the community. Both of these protective factors generally increase the likelihood that youth will not engage in antisocial behavior.

#### 4.1.3 Family Domain Risk and Protective Factors

Brief definitions of all family domain risk factors, as well as scale scores for the community domains assessed in APNA are provided in this section and in Tables 4-2 and Figure 4-2.

#### FAMILY RISK FACTORS

**Poor Family Management.** Poor family management practices include lack of clear expectations for behavior, failure of parents to monitor their children (knowing where they are and who they are with), and excessively severe or inconsistent punishment. The 2018 APNA results indicated that Arkansas youth in grades 6, 8, 10, 12 are at low risk, as scores are well below the cut point for risk (32.8, 24.5, 19.3, 19.4, respectively, with a cut point of 45).

**Family History of Antisocial Behavior.** If children are raised in a family with a history of addiction to alcohol or other drugs, criminal activity, the risk of the child having alcohol, other drugs, and juvenile delinquency problems increases. The 2018 APNA results indicated that Arkansas youth in grades 6, 8, 10, 12 are at low risk, as scores are well below the cut point for risk (28.8, 30.3, 30.4, and 29.1, respectively, with a cut point of 45).

**Parental Attitudes Favorable to Antisocial Behavior.** Similarly, children of parents who excuse their children for breaking the law are more likely to develop problems with juvenile delinquency. In families where parents display violent behavior toward those outside or inside the family, there is an increased risk of that child becoming violent. The 2018 APNA results indicated that Arkansas youth in grades 6, 8, 10, 12 are at low risk, as scores are below the cut point for risk (24.9, 36.0, 34.1, 32.2, respectively, with a cut point of 45).

**Parental Attitudes Favorable to ATOD Use.** Parental attitudes and behavior toward drugs influence the attitudes and behavior of their children. Parental approval of young people's moderate drinking, even under parental supervision, increases the risk of the young person using marijuana. Further, in families where parents involve children in their own drug or alcohol behavior, for example, asking the child to light the parent's cigarette or to get the parent a beer, there is an increased likelihood that their children will become drug abusers in adolescence. The 2018 APNA results indicated that Arkansas youth in grades 6, 8, 10, 12 are at low risk, as scores are well below the cut point for risk (8.9, 16.4, 23.4, 24.5, respectively, with a cut point of 45).

#### OTHER FAMILY DOMAIN PROTECTIVE FACTORS (NOT SURVEYED BY APNA)

**Family Attachment.** When children feel a strong, emotional attachment to their family, this serves as a powerful positive influence in their lives. Strong, positive family attachment can ameliorate the negative influences of numerous risk factors, including community and peer influences that otherwise would lead a child to involvement in problem behaviors.

FIGURE 4-2

## Risk Factors: Family Domain (2018)

#### 4.1.4 School Domain Risk and Protective Factors

Brief definitions of all school domain risk factors, as well as scale scores for the school domains assessed in APNA are provided in this section and in Tables 4-3 and Figures 4-3, 4-4.

##### SCHOOL RISK FACTORS

**Academic Failure.** The measurement of poor academic achievement is based on self-reports of students' school grades. Poor achievement in school operates in numerous ways to limit students' future opportunities. The 2018 APNA results indicated that Arkansas youth in grades 6, 8, 10, 12 are at low risk, as scores are only slightly below the cut point for risk (38.1, 40.1, 40.7, 37.1, respectively, with a cut point of 45).

**Low School Commitment.** Lack of commitment to school means the young person has ceased to see the role of student as a viable one. Young people who have lost this commitment to school are at higher risk for all five

problem behaviors. In this indicator, Arkansas students perform close to the cut point for risk at all grade levels, with scores of 43.3, 42.6, 44.8, and 43.3, for 6th, 8th, 10th, and 12th grade students, respectively.

##### SCHOOL PROTECTIVE FACTORS

**School Opportunities for Prosocial Involvement.** School opportunities for prosocial involvement refers to the students' perception that there are numerous rewarding prosocial activities that they can participate in within the school environment. The ability of the student to engage in prosocial opportunities at school is important to keeping the student engaged and involved with school. That, of course, leads to a cascade of other positive consequences in the student's life. The 2018 APNA results indicated that Arkansas youth in grades 8, 10, 12 are above the cut point (55), demonstrating these youth have protection with scores of 63.3, 64.1, and 61.6, respectively. Grade 6 students, however, reported a score of 47.3, indicating that fewer students report receiving a protective benefit than their national counterparts.

FIGURE 4-3

## Risk Factors: School Domain (2018)

FIGURE 4-4

## Protective Factors: School Domain (2018)

**School Rewards for Prosocial Involvement.** In this indicator, the issue is whether the school environment actively reinforces the student's prosocial behavior (appropriate conduct, dress, interaction with others). School environments that positively reinforce appropriate behavior can significantly increase the success of their school as well as help the individual student succeed. The 2018 APNA results indicated that Arkansas youth in grade 10 receive this protective benefit with their score of 55.1; however, grades 6, 8, and 12, performed below the cut point (45.7, 46.1, and 40.6, respectively).

#### 4.1.5 Peer/Individual Domain Risk and Protective Factors

Brief definitions of all peer/individual domain risk factors, as well as scale scores for the peer/individual domains assessed in APNA are provided in this section and in Tables 4-4 and Figures 4-5 and 4-6.

##### PEER/INDIVIDUAL RISK FACTORS

**Early Initiation of Antisocial Behavior.** Students in grades K-3 who express aggressive behavior and/or are isolated or withdrawn, are at greater risk of problems in adolescence. This increased risk also applies to aggressive behavior combined with hyperactivity or attention deficit disorder.

This risk factor also includes persistent antisocial behavior in early adolescence, like misbehaving in school, skipping school, and getting into fights with other children. Research has shown that students engaging in these behaviors are at increased risk for drug abuse, delinquency, teen pregnancy, school drop-out and violence. The 2018 APNA results indicated that Arkansas youth in grades 6, 8, 10, 12 are at low risk, as scores are well below the cut point for risk (16.7, 23.8, 25.0, 25.2, respectively, with a cut point of 45).

**Early Initiation of Drug Use.** The earlier young people begin using drugs, committing crimes, engaging in violent activity, becoming sexually active, and dropping out of school, the greater the likelihood that they will have problems with these behaviors later on. Research has shown that young people who initiate drug use before aged 15 years are at twice the risk of having drug problems as those whose initial use is after aged 19 years. The 2018 APNA results indicated that Arkansas youth in grades 6, 8, 10, 12 are at low risk, as scores are well below the cut point for risk (15.5, 14.6, 14.7, 15.5, respectively, with a cut point of 45).

**Attitudes Favorable Toward Antisocial Behavior.** Favorable attitudes toward antisocial behavior can take the form of approval of the behavior, a desire to participate, or approval of others who engage in the behavior. Any of these specific attitudes are known to directly lead to greater involvement in antisocial behavior. The 2018 APNA results indicate that Arkansas youth in grades 6, 8, 10, 12 are at low risk, as scores are well below the cut point for risk (28.6, 28.7, 32.4, 30.5, respectively, with a cut point of 45).

**Attitudes Favorable Toward Drug Use.** Favorable attitudes toward drug use can take the form of approval of the use of substances in general, or in the use of a specific substance, a desire to participate in drug use, or approval of others who engage in the behavior. Any of these specific attitudes are known to directly lead to greater involvement in drug use. The 2018 APNA results indicate that Arkansas youth in grades 6, 8, 10, 12 are at low risk, as scores are well below the cut point for risk (13.5, 19.9, 26.5, 25.1, respectively, with a cut point of 45).

**Perceived Risk of Drug Use.** When students perceive that drug use carries significant personal risk, they are less likely to engage in use. Perceived risk has been recognized for decades as a significant predictor of drug use, and student beliefs about drug-related risk have been well-measured since the 1970s. The perceived risks are influenced by several cultural- and peer-related factors, which can either increase or decrease the perceived risk. The 2018 APNA results indicate that Arkansas youth in grades 8, 10, 12 are at risk, as scores are above cut point for risk (48.6, 48.4, 55.0, respectively, with a cut point of 45).

**Interaction with Antisocial Peers.** Research has demonstrated that youth who associate with peers who engage in problem behaviors are much more likely to engage in the same problem behaviors. Even when young people come from well-managed families and do not experience other risk factors, just hanging out with those who engage in problem behaviors greatly increases their risks. The 2018 APNA results indicate that Arkansas youth in grades 6, 8, 10, 12 are at low risk, as scores are below the cut point for risk (30.6, 39.1, 38.1, 34.9, respectively, with a cut point of 45).

**Friends' Use of Drugs.** Modeling of peer behavior is part of the adolescent experience. When a significant proportion of the student's friends are using drugs, especially without any apparent negative consequences, this leads to an increased likelihood of drug involvement. The 2018 APNA results indicate that Arkansas youth in grades 6, 8, 10, 12 are at low risk, as scores are well below the cut point for risk (13.5, 19.9, 19.0, 16.8, respectively, with a cut point of 45).

**Rewards for Antisocial Involvement.** Adolescents will have opportunities to become involved with various student subgroups, some of whom will support and promote antisocial behavior. If the student is involved with peers who positively reinforce the student for their antisocial behavior, this increases the likelihood of further involvement in problem behavior. The 2018 APNA results indicate that Arkansas youth in grades 6, 8, 10, are at low risk, as scores are below the cut point for risk (25.1, 37.2, 39.6, respectively, with a cut point of 45); however, grade 12 students are at greater risk with a score of 48.8.

**Depression Scale.** Young people who are depressed are more likely to use drugs. When depressed, youth have difficulty in identifying and engaging in pro-social activities. They consequently do not gain recognition for demonstrating positive behaviors or do not develop attachments to their schools or communities. In the 2018 APNA survey, youth who scored highest on the items measuring depressive symptoms also scored significantly higher on all of the drug use questions. Of note, students in grades 8, 10, 12 all scored above the cut point for this indicator (45.2, 48.9, 46.3, respectively).

**Gang Involvement.** Youth who belong to gangs are more at-risk for anti-social behavior and drug use. Gang membership has been linked to violence, shootings, destruction of public property, and involvement in other illegal behaviors including distribution of drugs. The 2018 APNA results indicate that Arkansas youth in grades 6, 8, 10, 12 are at low risk, as scores are well below the cut point for risk (21.0, 12.3, 25.2, 27.0, respectively, with a cut point of 45).

## PEER/INDIVIDUAL PROTECTIVE FACTORS

**Religiosity.** Involvement with a faith community can protect the adolescent from involvement in problem behaviors. The 2018 APNA results indicate that this protective factor is apparent among Arkansas youth in grades 8, 10, 12 who scored 57.6, 55.8, 75.3, respectively; grade 6 students, with a score of 51.4 are not far behind.

OTHER PEER/INDIVIDUAL DOMAIN RISK AND PROTECTIVE FACTORS (NOT SURVEYED BY APNA)

Data on several factors were not collected in 2018. However, these peer/individual risk and protective factors influence youth behavior and are important to keep in mind.

## RISK FACTORS

**Rebelliousness.** Young people who feel they are not part of society, are not bound by rules, don't believe in trying to be successful or responsible, or who take an active rebellious stance toward society, are at higher risk of drug abuse, delinquency, and school dropout.

**Intentions to Use.** Many prevention programs focus on reducing the intention of participants to use ATODs later in life. Reduction of intention to use ATODs often follows successful prevention interventions.

**Sensation Seeking.** Constitutional factors have a biological or physiological basis. These factors are often seen in young people with behaviors such as sensation-seeking, low harm-avoidance, and lack of impulse control. These factors appear to increase the risk of young people abusing drugs, engaging in delinquent behavior, and/or committing violent acts.

FIGURE 4-5

## Risk Factors: Peer/Individual Domain (2018)

FIGURE 4-6

## Protective Factors: Peer/Individual Domain (2018)

## PROTECTIVE FACTORS

**Involvement with Prosocial Peers.** As might be expected, when adolescents are involved with prosocial peers, numerous positive effects are seen. They are more likely to engage in prosocial activities, be rewarded for those activities, and have a greater personal commitment to not engaging in problem behaviors.

**Social Skills.** Social skills are known to facilitate life success in a number of ways. Students are frequently faced with social situations in which they can either become involved with or avoid problem behaviors. Having good social skills, which allow youth to navigate these situations without negative social consequences, is known to predict healthy development.

**Belief in the Moral Order.** This protective factor measures the student's commitment to a common body of ethical and moral precepts generally accepted by all members of a society. Commitment to a shared ethical system binds the youth to the culture, promotes prosocial involvement, and reduces the likelihood that the student will become involved in antisocial behavior.

**Prosocial Involvement.** There are several ways that adolescents can be involved with their peers in prosocial activities. The list of potential activities is virtually limitless (which makes this protective factor difficult to measure), but not all adolescents avail themselves of the opportunities. When they do, involvement in prosocial activities is known to increase the likelihood that they will remain drug-free.

**Rewards for Prosocial Involvement.** Peer relationships can reward the adolescent for prosocial involvement. Those that do are known to increase the extent of the adolescent's prosocial involvement, and consequently have a beneficial effect in helping the adolescent avoid problem behaviors.

## Appendix A: Arkansas Prevention Needs Assessment 2018 Student Survey

# Arkansas Prevention Needs Assessment Student Survey

1. Thank you for agreeing to participate in this survey. The purpose of this survey is to learn how students in our schools feel about their community, family, peers, and school. The survey also asks about health behaviors.

**2. The survey is completely voluntary and anonymous. DO NOT put your name on the questionnaire.**

3. This is not a test, so there are no right or wrong answers. We would like you to work quickly so you can finish.

4. All of the questions should be answered by completely filling in one of the answer spaces. If you do not find an answer that fits exactly, use the one that comes closest. If any question does not apply to you, or you are not sure what it means, just leave it blank. You can skip any question that you do not wish to answer.

5. For questions that have the following answers: **NO! no yes YES!**  
Mark (the BIG) **YES!** if you think the statement is **DEFINITELY TRUE** for you.  
Mark (the little) **yes** if you think the statement is **MOSTLY TRUE** for you.  
Mark (the little) **no** if you think the statement is **MOSTLY NOT TRUE** for you.  
Mark (the BIG) **NO!** if you think the statement is **DEFINITELY NOT TRUE** for you.

Example: Chocolate is the best ice cream flavor.

In the example above, that student marked "yes" because he or she thinks the statement is mostly true.

**6. Please mark only one answer for each question, unless otherwise directed, by completely filling in the oval with a #2 pencil.**

- Are you:
 

☐ Male
 ☐ NO!
 ☒ no
 ☐ yes
 ☐ YES!
- How old are you?
 

☐ Female

☐ 10 or younger
 ☐ 15  
☐ 11
 ☐ 16  
☐ 12
 ☐ 17  
☐ 13
 ☐ 18  
☐ 14
 ☐ 19 or older
- What grade are you in?
 

☐ 6th
 ☐ 9th  
☐ 7th
 ☐ 10th  
☐ 8th
 ☐ 11th  
☐ 12th
- Are you Hispanic or Latino?
 

☐ No
 ☐ Yes
- What is your race? Select one or more.
 

☐ Black or African American  
☐ Asian  
☐ American Indian  
☐ Alaska Native  
☐ White  
☐ Native Hawaiian or Other Pacific Islander  
☐ Other
- What is the highest level of schooling completed by your mother or father?
 

☐ Completed grade school or less  
☐ Some high school  
☐ Completed high school  
☐ Some college  
☐ Completed college  
☐ Graduate or professional school after college  
☐ Don't know  
☐ Does not apply

**7. Think of where you live most of the time. Which of the following people live there with you? (Choose all that apply.)**

<input type="radio"/> Mother	<input type="radio"/> Grandfather
<input type="radio"/> Stepmother	<input type="radio"/> Uncle
<input type="radio"/> Foster Mother	<input type="radio"/> Other Adults
<input type="radio"/> Grandmother	<input type="radio"/> Brother(s)
<input type="radio"/> Aunt	<input type="radio"/> Stepbrother(s)

<input type="radio"/> Foster Father	<input type="radio"/> Other Children

**The next section asks about your experiences at school.**

	NO!	no	yes	YES!
8. In my school, students have lots of chances to help decide things like class activities and rules.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
9. Teachers ask me to work on special classroom projects.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
10. My teacher(s) notices when I am doing a good job and lets me know about it.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
11. There are lots of chances for students in my school to get involved in sports, clubs, and other school activities outside of class.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
12. There are lots of chances for students in my school to talk with a teacher one-on-one.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
13. I feel safe at my school.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
14. The school lets my parents know when I have done something well.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
15. My teachers praise me when I work hard in school.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
16. Are your school grades better than the grades of most students in your class?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
17. I have lots of chances to be part of class discussions or activities.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

[illegible]

18. Now thinking back over the past year in school, how often did you:

	Never	Rarely	Sometimes	Often	Almost always
a. enjoy being in school?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
b. hate being in school?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
c. try to do your best work in school?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

19. How often do you feel that the school work you are assigned is meaningful and important?

<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
-----------------------	-----------------------	-----------------------	-----------------------	-----------------------

20. Putting them all together, what were your grades like last year?

- ☐ Mostly F's  
☐ Mostly D's  
☐ Mostly C's  
☐ Mostly B's  
☐ Mostly A's

21. How important do you think the things you are learning in school are going to be for your later life?

- ☐ Very important  
☐ Quite important  
☐ Fairly important  
☐ Slightly important  
☐ Not at all important

22. During the LAST FOUR WEEKS how many whole days of school have you missed because you skipped or 'cut'?

- ☐ None  
☐ 1  
☐ 2  
☐ 3  
☐ 4-5  
☐ 6-10  
☐ 11 or more

The next questions ask about your feelings and experiences in other parts of your life.

23. What are the chances you would be seen as cool if you:

	No or very little chance	Little chance	Some chance	Pretty good chance	Very good chance
a. smoked cigarettes?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
b. worked hard at school?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
c. began drinking alcoholic beverage regularly, that is, at least once or twice a month?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
d. defended someone who was being bullied?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
e. smoked marijuana?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
f. carried a handgun?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
g. used e-cigarettes, e-cigars or e-hookahs (vaping)?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
h. bullied someone or cyber bullied someone?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

24. Think of your four best friends (the friends you feel closest to). In the past year (12 months), how many of your best friends have:

	0	1	2	3	4
a. participated in clubs, organizations or activities at school?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
b. smoked cigarettes?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
c. tried beer, wine or hard liquor (for example, vodka, whiskey, or gin) when their parents didn't know about it?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
d. used e-cigarettes, e-cigars or e-hookahs?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
e. used marijuana?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
f. used prescription drugs or non-prescription drugs for the purpose of getting high?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
g. used synthetic marijuana (K2, spice) or bath salts?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
h. used LSD, cocaine, amphetamines, or other illegal drugs?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
i. been bullied?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
j. been suspended from school?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
k. carried a handgun?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
l. sold illegal drugs?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
m. regularly attended religious services?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
n. stolen or tried to steal a motor vehicle such as a car or motorcycle?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
o. been arrested?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
p. dropped out of school?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
q. been members of a gang?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

25. How old were you when you first:

	Never	10 or younger	11	12	13	14	15	16	17 or older
a. smoked marijuana?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
b. smoked a cigarette, even just a puff?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
c. had more than a sip or two of beer, wine or hard liquor (for example, vodka, whiskey, or gin)?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
d. began drinking alcoholic beverages regularly, that is, at least once or twice month?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
e. used Pegaramide (peg, peggy)?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
f. got suspended from school?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
g. got arrested?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
h. carried a handgun?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
i. used e-cigarettes, e-cigars, or e-hookahs (vaping)?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
j. belonged to a gang?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
k. used prescription drugs not prescribed to you?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

176002

26. How wrong do you think it is for someone your age to:	Wrong			Not at all wrong
	Very wrong	A little bit wrong		
a. take a handgun to school?				
b. steal anything?				
c. pick a fight with someone?				
d. attack someone with the idea of seriously hurting them?				
e. stay away from school all day when their parents think they are at school?				
f. drink beer, wine or hard liquor (for example, vodka, whiskey, or gin) regularly?				
g. smoke cigarettes?				
h. smoke marijuana?				
i. use prescription drugs or non-prescription drugs for the purpose of getting high?				
j. use synthetic marijuana (K2, spice) or bath salts?				
k. use LSD, cocaine, amphetamines or another illegal drug?				
l. use e-cigarettes, e-cigs, or e-hookahs (vaping)?				

30. Have you ever belonged to a gang?

☐ No

☐ No, but would like to

☐ Yes, in the past

☐ Yes, below now

☐ Yes, but would like to get out

31. If you have ever belonged to a gang, did that gang have a name?

☐ No

☐ Yes

☐ I have never belonged to a gang

32. You are at a party at someone's house, and one of your friends offers you a drink containing alcohol. What would you say or do?

☐ Drink it

☐ Tell your friend, "No thanks, I don't drink" and suggest that you and your friend go and do something else

☐ Just say, "No thanks" and walk away

☐ Make up a good excuse, tell your friend you had something else to do, and leave

33. How often do you attend religious services or activities?

☐ Never

☐ Rarely

☐ 1-2 times a month

☐ About once a week or more

33. How often do you attend religious services or activities?

☐ Never

☐ Rarely

☐ 1-2 times a month

☐ About once a week or more

	NO!	no	yes	YES!
34. I think sometimes it's okay to cheat at school.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
35. It is important to think before you act.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
36. Sometimes I think that life is not worth it.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
37. At times I think I am no good at all.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
38. All in all, I am inclined to think that I am a failure.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
39. In the past year, have you felt depressed or sad MOST days, even if you felt okay sometimes?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
40. It is all right to beat up people if they start the fight.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
41. I think it is okay to take something without asking if you can get away with it.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

27. At school during the past 12 months, did you receive help from the resource teacher, speech therapist or other special education teacher?

28. How many times in the past year (12 months) have you:	10+ times				
	5 to 9 times	3 to 5 times	Never		
a. been suspended from school?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
b. carried a handgun?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
c. sold illegal drugs?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
d. stolen or tried to steal a motor vehicle such as a car or motorcycle?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
e. participated in clubs, organizations or activities at school?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
f. been arrested?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
g. attacked someone with the idea of seriously hurting them?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
h. been drunk or high at school?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
i. taken a handgun to school?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
j. use e-cigarettes, e-cigars, or e-hookahs (vaping)?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

29. Are you currently on probation, or assigned a probation officer with Juvenile Court?

☐ No ☒ Yes

	Very little	Some	Most	All the time
a. Parents/guardians	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
b. Friends	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
c. Family members	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
d. School	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
e. Internet	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
f. TV	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
g. Social media	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

[SERIAL]

43. How much do you think people risk harming themselves (physically or in other ways) if they:

	Great risk	Moderate risk	Slight risk	No risk
a. smoke one or more packs of cigarettes per day?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
b. try marijuana once or twice?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
c. smoke marijuana once or twice a week?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
d. take one or two drinks of an alcoholic beverage (beer, wine, liquor) nearly every day?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
e. have five or more drinks of an alcoholic beverage once or twice a weekend?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
f. use prescription drugs that are not prescribed to them?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
g. use non-prescription drugs to get high?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
h. use e-cigarettes, e-cigars, or e-hookahs?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

44. Have you ever used smokeless tobacco (chew, snuff, plug, dipping tobacco, or chewing tobacco)?

- ☐ Never  
☐ Once or twice  
☐ Once in a while but not regularly  
☐ Regularly in the past  
☐ Regularly now

45. How often have you used smokeless tobacco during the past 30 days?

- ☐ Not at all  
☐ Once or twice  
☐ Once or twice per week  
☐ Three to five times per week  
☐ About once a day  
☐ More than once a day

46. Have you ever smoked cigarettes?

- ☐ Never  
☐ Once or twice  
☐ Once in a while but not regularly  
☐ Regularly in the past  
☐ Regularly now

47. How frequently have you smoked cigarettes during the past 30 days?

- ☐ Not at all  
☐ Less than one cigarette per day  
☐ One to five cigarettes per day  
☐ About one-half pack per day  
☐ About one pack per day  
☐ About one and one-half packs per day  
☐ Two packs or more per day

48. Which statement best describes rules about smoking inside your home or your family cars?

- ☐ Smoking is not allowed anywhere inside your home or cars  
☐ Smoking is allowed in some places and at some times or in some cars  
☐ Smoking is allowed anywhere inside the home or cars  
☐ There are no rules about smoking inside the home or cars  
☐ I don't know

49. Have you ever used e-cigarettes, e-cigars or e-hookahs (vaping)?

- ☐ Never  
☐ Once or twice  
☐ Once in a while but not regularly  
☐ Regularly in the past  
☐ Regularly now

50. How frequently have you used e-cigarettes, e-cigars, or e-hookahs (vaping)?

- ☐ Not at all  
☐ Less than 10 puffs per day  
☐ 10 to 50 puffs per day  
☐ About one-half cartomiser per day  
☐ Two cartomisers or more per day

51. During this school year, were you taught in any of your classes about the dangers of tobacco use?

- ☐ Almost always  
☐ Often  
☐ Sometimes  
☐ Rarely  
☐ Never

52. During the past 12 months, have you participated in any community activities to discourage people your age from using cigarettes, chewing tobacco, snuff, dip, cigars, e-cigarettes, e-cigars, or e-hookahs?

- ☐ Almost always  
☐ Often  
☐ Sometimes  
☐ Rarely  
☐ Never

53. Think back over the last two weeks. How many times have you had five or more alcoholic drinks in a row?

- ☐ None  
☐ Once  
☐ Twice  
☐ 3-5 times  
☐ 6-9 times  
☐ 10 or more times

54. During the past 30 days, how many times did you ride in a car or other vehicle driven by someone who had been drinking alcohol or using drugs to get high?

- ☐ 0 times  
☐ 1 time  
☐ 2 or 3 times  
☐ 4 or 5 times  
☐ 6 or more times

55. During the past 30 days, how many times did you drive a car or other vehicle when you had been drinking alcohol or using drugs to get high?

- ☐ I did not drive a car in the past 30 days  
☐ 0 times  
☐ 1 time  
☐ 2 or 3 times  
☐ 4 or 5 times  
☐ 6 or more times

56. If you drank alcohol (not just a sip or taste) in the past year, where did you usually drink it? Select the one best answer.

- ☐ I did not drink alcohol in the past year  
☐ at my home  
☐ at someone else's home  
☐ at an open area like a park, beach, field, back road, woods, or a street corner  
☐ at a sporting event or concert  
☐ at a restaurant, bar, or a nightclub  
☐ at an empty building or a construction site  
☐ at a hotel/motel  
☐ in a car  
☐ at school

57. How do you feel about someone your age having one or two drinks of an alcoholic beverage nearly every day?

- ☐ Neither approve nor disapprove  
☐ Somewhat disapprove  
☐ Strongly disapprove  
☐ Don't know or can't say

On how many occasions (if any) have you:	OCCASIONS					
	0	1-2	3-5	6-9	10+	
58. had alcoholic beverages (beer, wine or hard liquor) to drink in your <b>lifetime</b> – more than just a few sips?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

87. If you smoked cigarettes (not just a puff or drag) in the past year, how did you usually get them? Select the one best answer.

- ☐ I did not smoke cigarettes in the past year  
☐ I bought them myself with a fake ID  
☐ I bought them myself without a fake ID  
☐ I got them from someone I know age 18 or older  
☐ I got them from someone I know under age 18  
☐ I got them from my brother or sister  
☐ I got them from home with my parents' permission  
☐ I got them from home without my parents' permission  
☐ I got them from another relative  
☐ A stranger bought them for me  
☐ I took them from a store or shop  
☐ Other

88. If you used e-cigarettes, e-cigars, or e-hookahs (not just a puff or drag) in the past year, how did you usually get them?

- ☐ I did not use e-cigarettes, e-cigars, or e-hookahs in the past year  
☐ I bought them in a store such as a convenience store, supermarket, discount store, or gas station  
☐ I got them on the Internet  
☐ I got them at a store that sells electronic cigarettes, such as a "vape shop"  
☐ I got them from a family member  
☐ I got them from a friend  
☐ A stranger got them for me  
☐ I took them from a store or shop  
☐ I got them some other way

89. If you used marijuana (grass, pot) (not just a puff or drag) in the past year, how did you usually get it?

- ☐ I did not use marijuana (grass, pot) in the past year  
☐ I bought it myself  
☐ I got it from someone at school  
☐ I got it from someone with a medical marijuana card  
☐ I got it from my brother or sister  
☐ I got it from another relative  
☐ Other

90. If you drank alcohol (not just a sip or taste) in the past year, how did you usually get it? Select the one best answer.

- ☐ I did not drink alcohol in the past year  
☐ I bought it myself with a fake ID  
☐ I bought it myself without a fake ID  
☐ I got it from someone I know age 21 or older  
☐ I got it from someone I know under age 21  
☐ I got it from my brother or sister  
☐ I got it from home with my parents' permission  
☐ I got it from home without my parents' permission  
☐ I got it from another relative  
☐ A stranger bought it for me  
☐ I took it from a store or shop  
☐ Other

91. If you used prescription drugs or over the counter drugs without a doctor telling you to use it or for the purpose of getting high, where did you get these drugs? Select all answers that apply.

- ☐ I did not use prescription drugs or over the counter drugs to get high  
☐ I bought it or took it from a store or shop  
☐ I got it from my parents with permission  
☐ I got it from home without permission  
☐ I got it from a relative with permission  
☐ I got it from a relative without permission  
☐ I got it from a friend's home with permission  
☐ I got it from a friend's home without permission  
☐ I got it from a friend while at school  
☐ I got it from a friend while at a party  
☐ I got it from a friend, elsewhere  
☐ I got it from an internet sale

92. During the last month, about how many marijuana cigarettes, or the equivalent, did you smoke a day, on the average? (If you shared them with other people, count only the amount YOU smoked).

- ☐ None  
☐ Less than 1 a day  
☐ 1 a day  
☐ 2-3 a day  
☐ 4-6 a day  
☐ 7-10 a day  
☐ 11 or more a day

93. How wrong do your friends feel it would be for you to:

	Not at all wrong	A little bit wrong	Wrong	Very wrong
a. have one or two drinks of an alcoholic beverage nearly every day?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
b. smoke tobacco?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
c. smoke marijuana?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
d. use prescription drugs not prescribed to you?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

These questions ask about the neighborhood and community where you live.

94. How wrong would most adults (over 21) in your neighborhood think it is for kids your age:

	Not at all wrong	A little bit wrong	Wrong	Very wrong
a. to use marijuana?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
b. to drink alcohol?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
c. to smoke cigarettes?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

95. How much do each of the following statements describe your neighborhood?

	NO!	no	yes	YES!
a. crime and/or drug selling	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
b. fights	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
c. lots of empty or abandoned buildings	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
d. lots of graffiti	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
96. I feel safe in my neighborhood.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

97. If a kid smoked marijuana in your neighborhood would he or she be caught by the police?

NO!	no	yes	YES!
<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

	NO!	no	yes	YES!
97. If a kid smoked marijuana in your neighborhood would he or she be caught by the police?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
98. If a kid drank some beer, wine or hard liquor (for example, vodka, whiskey, or gin) in your neighborhood would he or she be caught by the police?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
99. If a kid carried a handgun in your neighborhood would he or she be caught by the police?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

**The next few questions ask about your family. When answering these questions please think about the people you consider to be your family, for example, parents, stepparents, grandparents, aunts, uncles, etc.**

**110. How wrong do your parents feel it would be for YOU to:**

110. How wrong do your parents feel it would be for YOU to:		Not at all wrong	A little bit wrong	Wrong	Very wrong
a.	have one or two drinks of an alcoholic beverage nearly every day?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
b.	smoke tobacco?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
c.	smoke marijuana?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
d.	use prescription drugs not prescribed to you?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
e.	steal something?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
f.	draw graffiti, write things, or draw pictures on buildings or other property (without the owner's permission)?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
g.	pick a fight with someone?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

111. During the past 12 months, have you talked with at least one of your parents about the dangers of underage drinking and/or drinking and driving? By parents, we mean either your biological parents, adoptive parents, stepparents, or adult guardians - whether or not they live with you.

☐ No ☐ Yes

	NO!	no	yes	YES!
112. The rules in my family are clear.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
113. People in my family have serious arguments about the same things, and often insult or yell at each other.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
114. When I am not at home, one of my parents knows where I am and who I am with.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
115. My family has clear rules about alcohol and drug use.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
116. If you skipped school would you be caught by your parents?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
117. My parents ask if I've gotten my homework done.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
118. Would your parents know if you did not come home on time?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

**119. Do you know how to properly dispose of leftover prescription drugs?**

☐ No ☒ Yes

109. During the past 12 months, have you participated in any alcohol prevention programs or seen any alcohol prevention messages in your school or community?  
(Please check all that apply)

☐ Yes, a school-based program focused on preventing underage drinking and/or drinking and driving.

☐ Yes, a community-based program focused on preventing underage drinking and/or drinking and driving (for example, through your church or temple or through youth groups like Boys and Girls Club or 4-H).

- Yes, a media campaign addressing underage drinking and/or drinking and driving (for example, newspaper ads, posters, pamphlets, radio, TV).

$$\frac{NO}{O}$$

[SERIAL]

176007

120. Have any of your brothers or sisters ever:

	I don't have any brothers or sisters	
	Yes	No
a. drunk beer, wine or hard liquor (for example, vodka, whiskey or gin)?	<input type="radio"/>	<input type="radio"/>
b. smoked marijuana?	<input type="radio"/>	<input type="radio"/>
c. smoked cigarettes?	<input type="radio"/>	<input type="radio"/>
d. taken a handgun to school?	<input type="radio"/>	<input type="radio"/>
e. been suspended or expelled from school?	<input type="radio"/>	<input type="radio"/>
f. used e-cigarettes, e-cigars, or e-hookahs (vaping)?	<input type="radio"/>	<input type="radio"/>
g. used prescription drugs not prescribed for him/her?	<input type="radio"/>	<input type="radio"/>

127. How honest were you in filling out this survey?

- ☐ I was very honest  
☐ I was honest pretty much of the time  
☐ I was honest some of the time  
☐ I was honest once in a while  
☐ I was not honest at all

121. Have you changed homes in the past year (the last 12 months)?

- ☐ No  
☐ Yes

122. How many times have you changed homes since kindergarten?

- ☐ Never  
☐ 1 or 2 times  
☐ 3 or 4 times  
☐ 5 or 6 times  
☐ 7 or more times

123. Have you changed schools (including changing from elementary to middle and middle to high school) in the past year?

- ☐ No  
☐ Yes

124. How many times have you changed schools since kindergarten (including changing from elementary to middle and middle to high school)?

- ☐ Never  
☐ 1 or 2 times  
☐ 3 or 4 times  
☐ 5 or 6 times  
☐ 7 or more times

125. Has anyone in your family ever had a severe alcohol or drug problem?

- ☐ No  
☐ Yes

126. About how many adults (over 21) have you known personally who in the past year have:

	Number of Adults				
	0	1	2	3-4	5+
a. used marijuana, crack, cocaine, or other drugs?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
b. sold or dealt drugs?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
c. done other things that could get them in trouble with the police, like stealing, selling stolen goods, mugging or assaulting others, etc.?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
d. gotten drunk or high?	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Thank you for completing the survey.

28	Avg. Age of First Use - Grade 12 . . . . .	59

## 1 INTRODUCTION

This report summarizes findings from the Arkansas Prevention Needs Assessment Survey (APNA), a survey of 6th, 8th, 10th and 12th grade school students, conducted in the fall of 2018. This survey was available free of charge to all Arkansas public school districts that chose to participate. The survey was designed to assess adolescent substance use and related behaviors, and risk and protective factors that predict these behaviors. In this report, the results are presented for each grade along with the overall results for the State. Table 1 provides information on the total number of students statewide. Table 2 provides information on the number and percent of students at each grade. Table 3 provides information on the number and percent of students by sex. Table 4 provides information on the number and percent of students by ethnic origin.

The APNA Survey was first administered in the fall of 2002 and has been administered in the fall of each school year since then. Because trends over time are very important to prevention planning, readers are encouraged to review the results from the previous surveys. By comparing the results of the previous surveys, changes in ATOD (alcohol, tobacco and other drugs) use, rates of ASB (antisocial behavior), and levels of risk and protective factors can be determined for a specific grade. It is important to note that the results in this report are for students who were not sampled in the even grades (6, 8, 10, and 12) during the previous year's survey. Those students are now in grades 7, 9, 11 or are out of school. Together, the results of the current and past APNA surveys provide a complete picture of ATOD use, antisocial behavior, risk, and protection for students in Arkansas.

## 1.1 The Risk and Protective Factor Model of Prevention

Risk and protective factor-focused prevention is based on a simple premise: To prevent a problem from happening, we need to identify the factors that increase the risk of that problem developing and then find ways to reduce the risks. Just as medical researchers have found risk factors for heart attacks such as diets high in fats, lack of exercise, and smoking, a team of researchers, the Social Development Research Group (SDRG), at the University of Washington, have defined a set of risk factors for drug abuse. The research team also found that some children exposed to multiple risk factors manage to avoid behavior problems later even though they were exposed to the same risks as children who exhibited behavior problems. Based on research, they identified protective factors and processes that work together to buffer children from the effects of high risk exposure and lead to the development of healthy behaviors.

Risk factors include characteristics of school, community, and family environments, as well as characteristics of students and their peer groups that are known to predict increased likelihood of drug use, delinquency, and violent behaviors among youth (Hawkins, Catalano & Miller, 1992; Hawkins, Arthur & Catalano, 1995; Brewer, Hawkins, Catalano & Neckerman, 1995).

## 2 TOOLS FOR ASSESSMENT AND PLANNING

Protective factors exert a positive influence or buffer against the negative influence of risk, thus reducing the likelihood that adolescents will engage in problem behaviors. Protective factors, identified through research reviewed by the Social Development Research Group, include social bonding to family, school, community and peers; and healthy beliefs and clear standards for behavior.

Research on risk and protective factors has important implications for prevention efforts. The premise of this approach is that in order to promote positive youth development and prevent problem behaviors, it is necessary to address those factors that predict the problem. By measuring risk and protective factors in a population, specific risk factors that are elevated and widespread can be identified and targeted by preventive interventions that also promote related protective factors. For example, if academic failure is identified as an elevated risk factor in a community, then mentoring and tutoring interventions can be provided that will improve academic performance, and also increase opportunities and rewards for classroom participation.

Risk and protective factor-focused drug abuse prevention is based on the work of J. David Hawkins, Ph.D., Richard F. Catalano, Ph.D.; and a team of researchers at

the University of Washington in Seattle. Beginning in the early 1980's, the group researched adolescent problem behaviors and identified risk factors for adolescent drug abuse and delinquency. The chart below shows the links between the 16 risk factors and the five problem behaviors. The check marks have been placed in the chart to indicate where at least two well designed, published research studies have shown a link between the risk factor and the problem behavior.

YOUTH AT RISK	PROBLEM BEHAVIORS				
	Substance Abuse	Delinquency	Teen Pregnancy	School Drop-Out	Violence
<b>Community</b>					
Availability of Drugs and Firearms	✓				✓
Community Laws and Norms Favorable Toward Drug Use	✓				
Transitions and Mobility	✓	✓		✓	
Low Neighborhood Attachment and Community Disorganization	✓	✓			✓
Extreme Economic and Social Deprivation	✓	✓	✓	✓	✓

Friends Who Engage in a Problem Behavior	✓	✓	✓	✓	✓
Favorable Attitudes Toward the Problem Behavior	✓	✓	✓	✓	
Early Initiation of the Problem Behavior	✓	✓	✓	✓	✓

### 3 SCHOOL IMPROVEMENT USING SURVEY DATA

Data from the Arkansas Prevention Needs Assessment Survey can be used to help school and community planners assess current conditions and prioritize areas of greatest need.

Each risk and protective factor can be linked to specific types of interventions that have been shown to be effective in either reducing the risk(s) and enhancing the protection(s). The steps outlined below will help your school and community make key decisions regarding allocation of resources, how and when to address specific needs, and which strategies are most effective and known to produce results.

#### 3.1 What are the numbers telling you?

Review the charts and data tables presented in this report. Using the table in section 3.3, note your findings as you discuss the following questions

- Which 3 to 5 risk factors appear to be higher than you would want?
- Which 3 to 5 protective factors appear to be lower than you would want?
- Which levels of 30 day drug use are increasing and/or unacceptably high?
  - Which substances are your students using the most?
  - At which grades do you see unacceptable usage levels?
- Which levels of antisocial behaviors are increasing and/or unacceptably high?
  - Which behaviors are your students exhibiting the most?
  - At which grades do you see unacceptable behavior levels?

#### 3.2 How to decide if a rate is "unacceptable."

- Look across the charts to determine which items stand out as either much higher or much lower than the others.
- Compare your data to statewide data and national data. Differences of 5% or more between the local and other data should be carefully reviewed.
- Determine the standards and values held in your area. For example: Is it acceptable in your community for 75% of high school students to drink alcohol regularly even when the statewide percentage is 90?

#### 3.3 Use these data for planning:

- Substance use and antisocial behavior data - raise awareness about the problems and promote dialogue.
- Risk and protective factor data - identify exactly where the community needs to take action.
- Promising approaches - talk with resources listed on the last page of this report for ideas about programs that have been proven effective in addressing the risk factors that are high in your area, and in improving the protective factors that are low.

Measure	Unacceptable Rate #1	Unacceptable Rate #2	Unacceptable Rate #3	Unacceptable Rate #4
30 Day Drug Use				
Antisocial Behavior				
Risk Factors				
Protective Factors				

**How do I decide which intervention(s) to employ?**

- Strategies should be selected based on the risk factors that are high in your community and the protective factors that are low.
- Strategies should be age appropriate and employed prior to the onset of the problem behavior.
- Strategies chosen should address more than a single risk and protective factor.
- No single strategy offers the solution.

**How do I know whether or not the intervention was effective?**

- Participation in the annual administration of the survey provides trend data necessary for determining the effectiveness of the implemented intervention(s) and also provides data for determining any new efforts that are needed.

## 4 HOW TO READ THE CHARTS AND TABLES

1. Student responses for risk and protective factors, substance use and antisocial behavior questions are displayed by grade on the following pages.
2. The factors are grouped into 4 domains: community, family, school, and peer-individual.
3. The bars represent the percent of students in the grade who reported elevated risk or protection, substance use, antisocial behaviors or school safety concerns.
4. Scanning across these charts, you can easily determine which factors are most (or least) prevalent, thus identifying which are the most important for your community to address.
5. Bars will be complemented by a small dash. The dash shows the comparison from the state and provides additional information for you in determining the relative importance of each risk or protective factor.
6. A dashed line on each risk and protective factor chart represents the percentage of youth at risk or with protection for the seven state sample upon which the cut-points were developed. The seven states included in the norm group were Colorado, Illinois, Kansas, Maine, Oregon, Utah and Washington. This gives you a comparison to a national sample.
7. Brief definitions of the risk and protective factors can be found following the graphs.
8. The tables provide more detailed information and are broken down by grade level. The combined category consists of all the grade levels represented in this report combined together (ie. if the report is based on 10th and 12th graders then the combined category will be all the 10th and 12th graders combined). For the tables on substance use, some substances also have a comparison to the Monitoring the Future (MTF) data. Monitoring the Future is an annual federally funded national survey of substance use across the country for students in grade 8, 10 and 12. For some substances and for some years or some grades, there is no corresponding MTF data.
9. The following abbreviations are sometimes used in the tables and charts due to space constraints:

**ATOD** stands for Alcohol, Tobacco and Other Drug Use.

**ASB** stands for Antisocial Behaviors.

**PSI** stands for Prosocial Involvement.

**MTF** stands for Monitoring the Future.

Table 5: Risk and Protective Factor Scale Definition

Community Domain Risk Factors	
<b>Community Disorganization</b>	Research has shown that neighborhoods with high population density, lack of natural surveillance of public places, physical deterioration, and high rates of adult crime also have higher rates of juvenile crime and drug selling.
<b>Transitions and Mobility</b>	Research has shown that transitions from school to school may be accompanied by significant increases in rates of drug use, school dropout and antisocial behavior.
<b>Laws and Norms Favorable Toward Drug Use</b>	Research has shown that legal restrictions on alcohol and tobacco use, such as raising the legal drinking age, restricting smoking in public places, and increased taxation have been followed by decreases in consumption. Moreover, national surveys of high school seniors have shown that shifts in normative attitudes toward drug use have preceded changes in prevalence of use.
<b>Perceived Availability of Drugs</b>	The availability of cigarettes, alcohol, marijuana, and other illegal drugs has been related to the use of these substances by adolescents.
<b>Perceived Availability of Handguns</b>	The availability of handguns has also been related to the use of these substances by adolescents.
Family Domain Risk Factors	
<b>Poor Family Management</b>	Parents' use of inconsistent and/or unusually harsh or severe punishment with their children places them at higher risk for substance use and other problem behaviors. Also, parents' failure to provide clear expectations and to monitor their children's behavior makes it more likely that they will engage in drug abuse whether or not there are family drug problems.
<b>Family History of Antisocial Behavior</b>	When children are raised in a family with a history of problem behaviors (e.g., violence or ATOD use), the children are more likely to engage in these behaviors.
<b>Parental Attitudes Favorable Toward Drug Use</b>	In families where parents use illegal drugs, are heavy users of alcohol, or are tolerant of children's use, children are more likely to become drug abusers during adolescence. The risk is further increased if parents involve children in their own drug (or alcohol) using behavior, for example, asking the child to light the parent's cigarette or get the parent a beer from the refrigerator.

*continued on the next column*

Risk and Protective Factor Scale Definition (continued)

<b>Parental Attitudes Favorable Toward Antisocial Behavior</b>	In families where parents are tolerant of their child's antisocial behavior (i.e. fighting, stealing, defacing property, etc.), children are more likely to become drug abusers during adolescence.
School Domain Risk Factors	
<b>Academic Failure</b>	Beginning in the late elementary grades (grades 4-6) academic failure increases the risk of both drug abuse and delinquency. It appears that the experience of failure itself, for whatever reasons, increases the risk of problem behaviors.
<b>Low Commitment to School</b>	Surveys of high school seniors have shown that the use of hallucinogens, cocaine, heroin, stimulants, and sedatives or non-medically prescribed tranquilizers is significantly lower among students who expect to attend college than among those who do not. Factors such as liking school, spending time on homework, and perceiving the coursework as relevant are also negatively related to drug use.
School Domain Protective Factors	
<b>Opportunities for Prosocial Involvement</b>	When young people are given more opportunities to participate meaningfully in important activities at school, they are less likely to engage in drug use and other problem behaviors.
<b>Rewards for Prosocial Involvement</b>	When young people are recognized and rewarded for their contributions at school, they are less likely to be involved in substance use and other problem behaviors.
Individual/Peer Risk Factors	
<b>Early Initiation of Drug Use</b>	Early onset of drug use predicts misuse of drugs. The earlier the onset of any drug use, the greater the involvement in other drug use and the greater frequency of use. Onset of drug use prior to the age of 15 is a consistent predictor of drug abuse, and a later age of onset of drug use has been shown to predict lower drug involvement and a greater probability of discontinuation of use.
<b>Early Initiation of Antisocial Behavior</b>	Early onset of antisocial behaviors such as being suspended from school, arrests, carrying handguns, fighting, etc. makes young people more likely to be involved in substance abuse.
<b>Attitudes Favorable Toward Drug Use</b>	During the elementary school years, most children express anti-drug, anti-crime, and pro-social attitudes and have difficulty imagining why people use drugs. However, in middle school, as more youth are exposed to others who use drugs, their attitudes often shift toward greater acceptance of these behaviors. Youth who express positive attitudes toward drug use are more likely to engage in a variety of problem behaviors, including drug use.

*continued on the next column*

## Risk and Protective Factor Scale Definition (continued)

<b>Attitudes Favorable Toward Antisocial Behavior</b>	During the elementary school years, most children express anti-drug, anti-crime, and pro-social attitudes and have difficulty imagining why people engage in antisocial behaviors. However, in middle school, as more youth are exposed to others who engage in antisocial behavior, their attitudes often shift toward greater acceptance of these behaviors. Youth who express positive attitudes toward antisocial behavior are more likely to engage in a variety of problem behaviors, including antisocial behavior.
<b>Low Perceived Risk of Drug Use</b>	Young people who do not perceive drug use to be risky are far more likely to engage in drug use.
<b>Interaction with Antisocial Peers</b>	Young people who associate with peers who engage in problem behaviors are at higher risk for engaging in antisocial behavior themselves.
<b>Friends' Use of Drugs</b>	Young people who associate with peers who engage in alcohol or substance abuse are much more likely to engage in the same behavior. Peer drug use has consistently been found to be among the strongest predictors of substance use among youth. Even when young people come from well-managed families and do not experience other risk factors, spending time with friends who use drugs greatly increases the risk of that problem developing.
<b>Rewards for Antisocial Involvement</b>	Young people who receive rewards for their antisocial behavior are at higher risk for engaging further in antisocial behavior and substance use.
<b>Depressive Symptoms</b>	Young people who express feelings of sadness for long periods over the past year and who have negative attitudes about themselves and life in general are more likely to use drugs.
<b>Gang Involvement</b>	Gang involvement by young people is strongly related to many problem behaviors including drug use.
<b>Individual/Peer Protective Factors</b>	
<b>Religiosity</b>	Young people who regularly attend religious services are less likely to engage in problem behaviors.

Combined	state	94.2	1.3	4.5

## 5 AGE OF FIRST USE

The Age of First Use Profile looks specifically at student responses to the questions *"How old were you when you first ..."*. The questions cover both first incidences of drug use (marijuana, cigarettes, alcohol, and regular use of alcohol) and first incidences of antisocial behaviors (suspension, arrest, carrying a gun, attacking someone and belonging to a gang). Possible responses to these questions range from age 10 to age 17 or the student can respond to the question with *"Never"*. The average age figures are based only on those students who responded to the question with an answer other than *"Never"*.

## 6 STUDENT TOBACCO USE, EXPERIENCES AND PREVENTION SERVICES

Tobacco use is the leading preventable cause of death in the United States.

Arkansas youth typically have higher rates of tobacco use, including both cigarettes and smokeless tobacco, than the national average. Higher tobacco prevalence rates are common across the Southeast United States. This is due to a variety of cultural and economic factors that have traditionally supported greater tobacco use. The following table shows the results of the lifetime and past 30 day use of cigarettes and chewing tobacco.

Table 105: Cigarettes - Lifetime Use

Grade	Group	2015-16	2016-17	2017-18	2018-19

## 7 DRUG-FREE COMMUNITIES SUPPORT PROGRAM CORE MEASURES

The Drug-Free Communities Support Program, administered by the Center for Substance Abuse Prevention, requests specific data which is typically referred to as the Core Measures. The drug categories measured are cigarettes/tobacco, alcohol, marijuana and prescription drugs and the table is broken down by grade level. For each drug, and at each grade level, the percentage of students who responded positively to the question and the number of students who responded to the question are reported.

**Past 30-Day Use** The question *"On how many occasions (if any) have you ... in the past 30 days?"* is used to measure this statistic by reporting the percentage of students who report any use in the past 30 days.

**Perception of Risk** The question *"How much do you think people risk harming themselves (physically or in other ways) if they ...?"* is used to measure this statistic by reporting the percentage of students who report that using the drug is a *"Moderate Risk"* or a *"Great Risk"* to their health.

**Perception of Parental Disapproval** The question *"How wrong do your parents feel it would be for you to ...?"* is used to measure this statistic by reporting the percentage of students who report that parents would feel it is *"Wrong"* or *"Very Wrong"* to use tobacco, alcohol and marijuana.

**Perception of Friends Disapproval** The question *"How wrong do your friends feel it would be for you to ...?"* is used to measure this statistic by reporting the percentage of students who report that friends would feel it is *"Wrong"* or *"Very Wrong"* to use tobacco, alcohol and marijuana.

## 8 PREVENTION RESOURCES

### 8.1 Regional Prevention Providers (RPP)

#### Region 1 -- Benton, Carroll, Madison, Washington

Quapaw House, Inc. -- (479) 927-2655 Fax: (479) 927-2752

Address: 614 E. Emma Avenue, Suite M426

Springdale, AR 72764

Laurie Reh -- [lauriereh@quapawhouseinc.org](mailto:lauriereh@quapawhouseinc.org)

Codi McCuiston -- [codimccuiston@quapawhouseinc.org](mailto:codimccuiston@quapawhouseinc.org)

#### Region 2 -- Baxter, Boone, Marion, Newton, Searcy

North Arkansas Partnership for Health Education

Address: 303 N. Main

Harrison, AR 72601

Cell: 870-365-6518 Fax: (870) 391-3507

Cindy DeWitt -- [cindy.dewitt@northark.edu](mailto:cindy.dewitt@northark.edu)

#### Region 3 -- Cleburne, Fulton, Independence, Izard, Jackson, Sharp, Stone, Van Buren, White, Woodruff

Quapaw House, Inc. -- (501) 745-5640

Address: 244 Hwy 65 South, Suite 6

Clinton, AR 72031

Margaret Morrison -- [mmorrison@hra.pfh.org](mailto:mmorrison@hra.pfh.org)

Address: 25 Gap Road

Batesville, AR 72501

Office: (870) 698-9532

Stacy Taylor -- [stacytaylor@quapawhouseinc.org](mailto:stacytaylor@quapawhouseinc.org)

#### Region 4 -- Clay, Craighead, Greene, Lawrence, Mississippi, Poinsett, Randolph

Crowley's Ridge -- (870) 933-0033 Fax: (870) 933-0048

Address: 2401 Fox Meadows Lane

Jonesboro, AR 72404

Dr. Lisa Perry -- [lperry@crdcnea.com](mailto:lperry@crdcnea.com)

#### Region 5 -- Crawford, Franklin, Logan, Polk, Scott, Sebastian

Harbor House - (479) 785-4083 ext. 212 or 204 / Fax: (479) 783-1914

Address: 3900 Armour Avenue

Fort Smith, AR 72904

Tabitha Fondren -- [tfondren@recoveryhhi.org](mailto:tfondren@recoveryhhi.org)

Katie Priest -- [kpriest@recoveryhhi.org](mailto:kpriest@recoveryhhi.org)

**Region 6 -- Conway, Faulkner, Johnson, Perry, Pope, Yell**

Community Service Inc. (501) 354-4589 Fax: (501) 354-5410

Physical Address: 100 South Cherokeei

Morrilton, AR 72110

Mailing Address: PO BOX 679

Morrilton, AR 72110

Shannon Cook -- [scook@csiyouth.com](mailto:scook@csiyouth.com)

Address: 1505 South Oswego Avenue

Russellville, AR 72802

Office: (479) 967-3370 Fax: (479) 967-2775

Amy Mellick -- [amellick@csiyouth.com](mailto:amellick@csiyouth.com)

**Region 7 -- Crittendon, Cross, Lee, Monroe, Phillips, St. Francis**

Crowley's Ridge -- (870) 298-2249 Fax: (870) 298-2249

Address: 593 Highway 243

Marianna, AR 72360

Kendon Gray -- [kendon@crdcnea.com](mailto:kendon@crdcnea.com)

**Region 8 -- Clark, Garland, Hot Springs, Montgomery, Pike**

CHI St. Vincent

Address: 1 Mercy Lane Suite 507B

Hot Springs, AR 71913

Lindsay Mulkey -- [lindsaymulkey@catholichealth.net](mailto:lindsaymulkey@catholichealth.net)

Katie Yamauchi -- [katelynyamauchi@catholichealth.net](mailto:katelynyamauchi@catholichealth.net)

Office: (501) 622-4112 (Lindsay) (501) 622-4116 (Katie)

Fax: (501) 622-1278

**Region 9 -- Lonoke, Prairie, Pulaski, Saline**

Family Service Agency -- (501) 372-4242 ext. 752 (Hayse) or 753 (Genine)

Fax: (501) 372-4758

Address: 628 West Broadway Street Suite 300

North Little Rock, AR 72114

Hayse Miller -- [hmillers@sainc.org](mailto:hmillers@sainc.org)

Genine Perez -- [gperez@sainc.org](mailto:gperez@sainc.org)

**Region 10 -- Hempstead, Howard, Lafayette, Little River, Miller, Sevier**

Harbor House -- (501) 517-1862

Address: 600 Walnut Street

Texarkana, AR 71854

Trena Goings -- [tgoings@recoveryhhi.org](mailto:tgoings@recoveryhhi.org)

**Region 11 -- Calhoun, Columbia, Dallas, Nevada, Ouachita, Union**

Harbor House -- (870) 901-3551 Fax: (870) 901-3552

Address: 124 S. Jackson Street Suite 411

Magnolia, AR 71754

Alex Smith -- [asmith@recoveryhhi.org](mailto:asmith@recoveryhhi.org)

**Region 12 -- Arkansas, Cleveland, Grant, Jefferson, Lincoln**

Community Empowerment Council Inc. -- (870) 738-8549 or (870) 536-2722

Fax: (870) 536-8500

Address: 4701 Dollarway Road

Pine Bluff, AR 71602

Jermaine Anderson -- [jermaineanderson@cecemp.org](mailto:jermaineanderson@cecemp.org)

Tanishia Lewis -- [tanishialewis@cecemp.org](mailto:tanishialewis@cecemp.org)

**Region 13 -- Ashley, Bradley, Chicot, Desha, Drew**

Phoenix Youth & Family Services -- (870) 364-1676 ext. 3 Fax: (870) 364-1779

Address: 310 North Alabama Street

Crossett, AR 71635

Christie Lindsey -- [clindsey@phoenixyouth.com](mailto:clindsey@phoenixyouth.com)
