# **1** INTRODUCTION

This report summarizes findings from the Arkansas Prevention Needs Assessment Survey (APNA), a survey of 6th, 8th, 10th and 12th grade school students, conducted in the fall of 2008. This survey was available free of charge to all Arkansas public school districts that chose to participate. The survey was designed to assess adolescent substance use and related behaviors, and risk and protective factors that predict these behaviors. In this report, the results are presented for each grade along with the overall results for the State. Table 1 provides information on the total number of students, the number of school districts and the number of schools represented by this report. Table 2 provides information on the number and percent of students at each grade. Table 3 provides information on the number and percent of students by sex. Table 4 provides information on the number and percent of students by ethnic origin.

The APNA Survey was first administered in the fall of 2002 and has been administered in the fall of each school year since then. Because trends over time are very important to prevention planning, readers are encouraged to review the results from the previous surveys. By comparing the results of the previous surveys, changes in ATOD (alcohol, tobacco and other drugs) use and rates of ASB (antisocial behavior), levels of risk and protective factors can be determined for a specific grade. It is important to note that the results in this report are for students who were not sampled in the even grades (6, 8, 10, and 12) during the previous years' survey. Those students are now in grades 7, 9, 11 or are out of school. Together, the results of the current and past APNA surveys provide a complete picture of ATOD use, antisocial behavior, risk, and protection for students in Arkansas. (Methods Note Regarding Long-Term Trend Data:) The 2006 procedures varied from those used in this report, as well as those used in the 2007, 2005 and earlier reports. Non-standard procedures for calculating: 1) drug prevalence rates, and 2) for calculating scores on the risk and protective factor questions, were used in the 2006 report. The variation in 2006 procedures related to how missing data (i.e., instances where the student did not respond to a question) were counted. The effect of the 2006 procedure was to slightly reduce the reported prevalence levels for all drugs, and to lower the calculated scores for the risk and protective factor questions.

In this report, the computational methods used for all calculations are identical to those used in the 2007, 2005 (and prior) reports. In addition, to produce the most accurate long-term trend data possible, 2006 results have been recalculated using standard procedures consistent with all reporting years. This means that, in some cases, small deviations in 2006 data points will be noted between this report and the actual 2006 report.

Table 1: Student Totals

Response	Group	2005	2006	2007	2008

#### 1.1 The Risk and Protective Factor Model of Prevention

Risk and protective factor-focused prevention is based on a simple premise: To prevent a problem from happening, we need to identify the factors that increase the risk of that problem developing and then find ways to reduce the risks. Just as medical researchers have found risk factors for heart attacks such as diets high in fats, lack of exercise, and smoking, a team of researchers, the Social Development Research Group (SDRG), at the University of Washington, have defined a set of risk factors for drug abuse. The research team also found that some children exposed to multiple risk factors manage to avoid behavior problems later even though they were exposed to the same risks as children who exhibited behavior problems. Based on research, they identified protective factors and processes that work together to buffer children from the effects of high risk exposure and lead to the development of healthy behaviors.

Risk factors include characteristics of school, community, and family environments, as well as characteristics of students and their peer groups that are known to predict increased likelihood of drug use, delinquency, and violent behaviors among youth (Hawkins, Catalano & Miller, 1992; Hawkins, Arthur & Catalano, 1995; Brewer, Hawkins, Catalano & Neckerman, 1995).

# 2 TOOLS FOR ASSESSMENT AND PLANNING

Protective factors exert a positive influence or buffer against the negative influence of risk, thus reducing the likelihood that adolescents will engage in problem behaviors. Protective factors, identified through research reviewed by the Social Development Research Group, include social bonding to family, school, community and peers; and healthy beliefs and clear standards for behavior.

Research on risk and protective factors has important implications for prevention efforts. The premise of this approach is that in order to promote positive youth development and prevent problem behaviors, it is necessary to address those factors that predict the problem. By measuring risk and protective factors in a population, specific risk factors that are elevated and widespread can be identified and targeted by preventive interventions that also promote related protective factors. For example, if academic failure is identified as an elevated risk factor in a community, then mentoring and tutoring interventions can be provided that will improve academic performance, and also increase opportunities and rewards for classroom participation. Risk and protective factor-focused drug abuse prevention is based on the work of J. David Hawkins, Ph.D., Richard F. Catalano, Ph.D.; and a team of researchers at the University of Washington in Seattle. Beginning in the early 1980's, the group researched adolescent problem behaviors and identified risk factors for adolescent drug abuse and delinquency. The chart above shows the links between the 16 risk factors and the five problem behaviors. The check marks have been placed in the chart to indicate where at least two well designed, published research studies have shown a link between the risk factor and the problem behavior.

	PROBLEM BEHAVIORS							
YOUTH AT RISK	Substance Abuse	Delinquency	Teen Pregnancy	School Drop-Out	Violence			
Community								
Availability of Drugs and Firearms	✓				✓			
Community Laws and Norms Favorable Toward Drug Use	~							
Transitions and Mobility	✓	✓		✓

# 3 SCHOOL IMPROVEMENT USING SURVEY DATA

Data from the Arkansas Prevention Needs Assessment Survey can be used to help school and community planners assess current conditions and prioritize areas of greatest need.

Each risk and protective factor can be linked to specific types of interventions that have been shown to be effective in either reducing the risk(s) and enhancing the protection(s). The steps outlined below will help your school and community make key decisions regarding allocation of resources, how and when to address specific needs, and which strategies are most effective and known to produce results.

#### 3.1 What are the numbers telling you?

Review the charts and data tables presented in this report. Using the table in section 3.3, note your findings as you discuss the following questions

- Which 3 to 5 risk factors appear to be higher than you would want?
- Which 3 to 5 protective factors appear to be lower than you would want?
- Which levels of 30 day drug use are increasing and/or unacceptably high?
  - Which substances are your students using the most?
  - At which grades do you see unacceptable usage levels?
- Which levels of antisocial behaviors are increasing and/or unacceptably high?
  - Which behaviors are your students exhibiting the most?
  - At which grades do you see unacceptable behavior levels?

#### 3.2 How to decide if a rate is "unacceptable."

- Look across the charts to determine which items stand out as either much higher or much lower than the others.
- Compare your data to statewide data and national data. Differences of 5% or more between the local and other data should be carefully reviewed.
- Determine the standards and values held in your area. For example: Is it acceptable in your community for 75% of high school students to drink alcohol regularly even when the statewide percentage is 90?

#### 3.3 Use these data for planning:

- Substance use and antisocial behavior data raise awareness about the problems and promote dialogue.
- Risk and protective factor data identify exactly where the community needs to take action.
- Promising approaches talk with resources listed on the last page of this report for ideas about programs that have been proven effective in addressing the risk factors that are high in your area, and in improving the protective factors that are low.

	Unacceptable	Unacceptable	Unacceptable	Unacceptable
Measure	Rate $\#1$	Rate #2	Rate #3	Rate #4
30 Day				
Drug Use				
Antisocial				
Behavior				
Risk				
Factors				
Protective				
Factors				

#### How do I decide which intervention(s) to employ?

- Strategies should be selected based on the risk factors that are high in your community and the protective factors that are low.
- Strategies should be age appropriate and employed prior to the onset of the problem behavior.
- Strategies chosen should address more than a single risk and protective factor.
- No single strategy offers the solution.

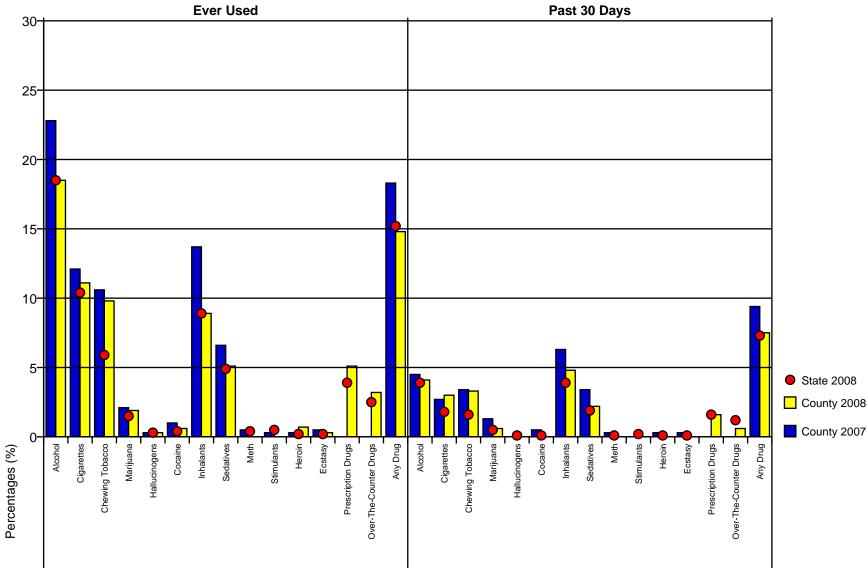

#### How do I know whether or not the intervention was effective?

• Participation in the annual administration of the survey provides trend data necessary for determining the effectiveness of the implemented intervention(s) and also provides data for determining any new efforts that are needed.

### 4 HOW TO READ THE CHARTS AND TABLES

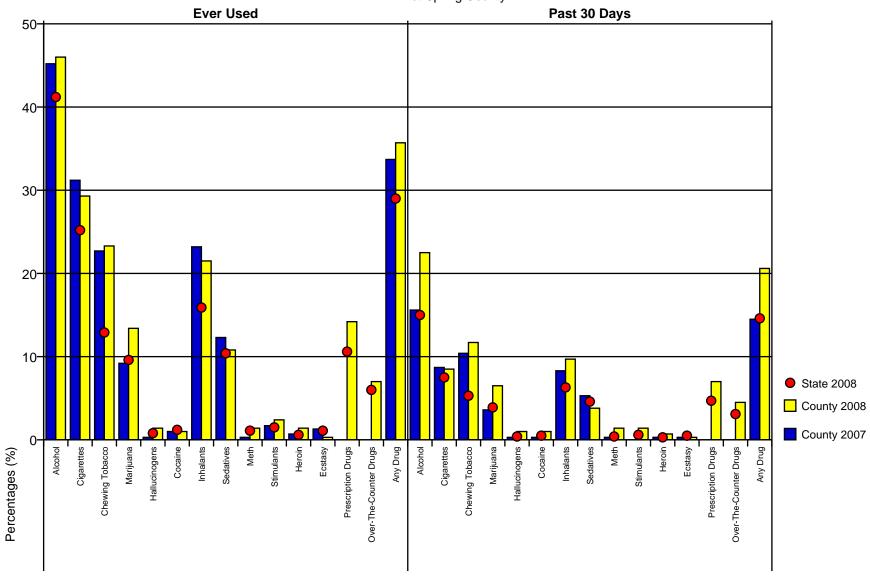

- 1. Student responses for risk and protective factors, substance use and antisocial behavior questions are displayed by grade on the following pages.
- 2. The factors are grouped into 4 domains: community, family, peer-individual, and school.
- 3. The bars represent the percent of students in the grade who reported elevated risk or protection, substance use, antisocial behaviors or school safety concerns.
- 4. Scanning across these charts, you can easily determine which factors are most (or least) prevalent, thus identifying which are the most important for your community to address.
- 5. Bars will be complemented by a small dot. The dot shows the comparison from the state and provides additional information for you in determining the relative importance of each risk or protective factor.
- 6. A dashed line on each risk and protective factor chart represents the percentage of youth at risk or with protection for the seven state sample upon which the cut-points were developed. The seven states included in the norm group were Colorado, Illinois, Kansas, Maine, Oregon, Utah and Washington. This gives you a comparison to a national sample.
- 7. Brief definitions of the risk and protective factors can be found following the graphs.
- 8. The tables provide more detailed information and are broken down by grade level. The combined category consists of all the grade levels represented in this report combined together (ie. if the report based of 10th and 12th graders then the combined category will be all the 10th and 12th graders combined).
- 9. The following abbreviations are sometimes used in the tables and charts due to space constraints:

**ATOD** stands for Alcohol, Tobacco and Other Drug Use. **ASB** stands for Antisocial Behaviors. **PSI** stands for Prosocial Involvement.

Table 5: Risk and Protective Factor Scale Definition

	Community Domain Risk Factors			
Low Neighborhood	A low level of bonding to the neighborhood is related to higher			
Attachment	levels of juvenile crime and drug selling.			
Community	Research has shown that neighborhoods with high population			
Disorganization	density, lack of natural surveillance of public places, physical			
	deterioration, and high rates of adult crime also have higher			
	rates of juvenile crime and drug selling.			
Laws and Norms	Research has shown that legal restrictions on alcohol and to-			
Favorable Toward	bacco use, such as raising the legal drinking age, restricting			
Drug Use	smoking in public places, and increased taxation have been fol-			
	lowed by decreases in consumption. Moreover, national surveys			
	of high school seniors have shown that shifts in normative atti-			
	tudes toward drug use have preceded changes in prevalence of			
	use.			
Perceived Availability	The availability of cigarettes, alcohol, marijuana, and other il-			
of Drugs	legal drugs has been related to the use of these substances by			
	adolescents.			
Perceived Availability	The availability of handguns has also been related to the use of			
of Handguns	these substances by adolescents.			
	Community Domain Protective Factors			
Opportunities for	When opportunities are available in a community for positive			
Prosocial	participation, children are less likely to engage in substance use			
Involvement	and other problem behaviors.			
Rewards for	Rewards for positive participation in activities help children bond			
Prosocial	to the community, thus lowering their risk for substance use.			
Involvement				
	Family Domain Risk Factors			
Poor Family	$\ensuremath{Parents}'$ use of inconsistent and/or unusually harsh or severe			
Management	punishment with their children places them at higher risk for			
	substance use and other problem behaviors. Also, parents' fail-			
	ure to provide clear expectations and to monitor their children's			
	behavior makes it more likely that they will engage in drug abuse			
	whether or not there are family drug problems.

# Risk and Protective Factor Scale Definition (continued)

	rotective Factor Scale Definition (continued)				
Family Conflict	Children raised in families high in conflict, whether or not the				
	child is directly involved in the conflict, appear at risk for both				
	delinquency and drug use.				
Family History of	When children are raised in a family with a history of problem				
Antisocial Behavior	behaviors (e.g., violence or ATOD use), the children are more				
	likely to engage in these behaviors.				
Parental Attitudes	In families where parents use illegal drugs, are heavy users of				
Favorable Toward	alcohol, or are tolerant of children's use, children are more likely				
Drug Use	to become drug abusers during adolescence. The risk is further				
	increased if parents involve children in their own drug (or alco-				
	hol) using behavior, for example, asking the child to light the				
	parent's cigarette or get the parent a beer from the refrigerator.				
Parental Attitudes	In families where parents are tolerant of their child's antisocial				
Favorable Toward	behavior (i.e. fighting, stealing, defacing property, etc.), chil-				
Antisocial Behavior	dren are more likely to become drug abusers during adolescence.				
	Family Domain Protective Factors				
Family Attachment	Young people who feel that they are a valued part of their family				
-	are less likely to engage in substance use and other problem				
	behaviors.				
Opportunities for	Young people who are exposed to more opportunities to par-				
Prosocial	ticipate meaningfully in the responsibilities and activities of the				
Involvement	family are less likely to engage in drug use and other problem				
	behaviors.				
Rewards for Prosocial	When parents, siblings, and other family members praise, en-				
Involvement	courage, and attend to things done well by their child, children				
	are less likely to engage in substance use and problem behaviors.				
	School Domain Risk Factors				
Academic Failure	Beginning in the late elementary grades (grades 4-6) academic				
	failure increases the risk of both drug abuse and delinquency. It				
	appears that the experience of failure itself, for whatever reasons,				
	increases the risk of problem behaviors.				
Low Commitment	Surveys of high school seniors have shown that the use of hal-				
to School	lucinogens, cocaine, heroin, stimulants, and sedatives or non-				
	medically prescribed tranquilizers is significantly lower among				
	students who expect to attend college than among those who do				
	not. Factors such as liking school, spending time on homework,				
	and perceiving the coursework as relevant are also negatively				
	related to drug use.

Risk and Protective Factor	Scale Definition (	(continued)
----------------------------	--------------------	-------------

	School Domain Protective Factors			
One esternition for				
Opportunities for	When young people are given more opportunities to participate			
Prosocial	meaningfully in important activities at school, they are less likely			
Involvement	to engage in drug use and other problem behaviors.			
Rewards for	When young people are recognized and rewarded for their contri-			
Prosocial	butions at school, they are less likely to be involved in substance			
Involvement	use and other problem behaviors.			
	Peer-Individual Risk Factors			
Rebelliousness	Young people who do not feel part of society, are not bound by			
	rules, don't believe in trying to be successful or responsible, or			
	who take an active rebellious stance toward society, are at higher			
	risk of abusing drugs. In addition, high tolerance for deviance,			
	a strong need for independence and normlessness have all been			
	linked with drug use.			
Early Initiation	Early onset of drug use predicts misuse of drugs. The earlier the			
of Drug Use	onset of any drug use, the greater the involvement in other drug			
	use and the greater frequency of use. Onset of drug use prior to			
	the age of 15 is a consistent predictor of drug abuse, and a later			
	age of onset of drug use has been shown to predict lower drug			
	involvement and a greater probability of discontinuation of use.			
Early Initiation	Early onset of antisocial behaviors such as being suspended from			
of Antisocial Behavior	school, arrests, carrying handguns, fighting, etc. makes young			
	people more likely to be involved in substance abuse.			
Attitudes Favorable	During the elementary school years, most children express anti-			
Toward Drug Use and	drug, anti-crime, and pro-social attitudes and have difficulty			
Antisocial Behavior	imagining why people use drugs or engage in antisocial behav-			
	iors. However, in middle school, as more youth are exposed to			
	others who use drugs and engage in antisocial behavior, their at-			
	titudes often shift toward greater acceptance of these behaviors.			
	Youth who express positive attitudes toward drug use and anti-			
	social behavior are more likely to engage in a variety of problem			
	behaviors, including drug use.			

continued on the next column

# Risk and Protective Factor Scale Definition (continued)

	Totective Pactor Scale Definition (continued)
Perceived Risk of	Young people who do not perceive drug use to be risky are far
Drug Use	more likely to engage in drug use.
Interaction with	Young people who associate with peers who engage in problem
Antisocial Peers	behaviors are at higher risk for engaging in antisocial behavior
	themselves.
Friends' Use of Drugs	Young people who associate with peers who engage in alcohol or
	substance abuse are much more likely to engage in the same be-
	havior. Peer drug use has consistently been found to be among
	the strongest predictors of substance use among youth. Even
	when young people come from well-managed families and do not
	experience other risk factors, spending time with friends who use
	drugs greatly increases the risk of that problem developing.
Depressive	Young people who express feelings of sadness for long peroids
Symptoms	over the past year and who have negative attitudes about them-
	selves and life in general are more likely to use drugs.
Rewards for	Young people who receive rewards for their antisocial behavior
Antisocial Behavior	are at higher risk for engaging further in antisocial behavior and
	substance use.
	Peer-Individual Protective Factors
Religiosity	Young people who regularly attend religious services are less
	likely to engage in problem behaviors.
Social Skills	Young people who are socially competent and engage in positive
	interpersonal relations with their peers are less likely to use drugs
	and engage in other problem behaviors.
Belief in the	Young people who have a belief in what is "right" or "wrong"
Moral Order	are less likely to use drugs.
Prosocial	Participation in positive school and community activities helps
Involvement	provide protection for youth.
Rewards for	Young people who are rewarded for working hard in school and
Prosocial	volunteering in the community are less likely to engage in prob-
Involvement	lem behavior.

# 5 NO CHILD LEFT BEHIND PROFILE

The No Child Left Behind Profile looks specifically at student responses to the questions "How old were you when you first ...". The questions cover both first incidences of drug use (marijuana, cigarettes, alcohol, and regular use of alcohol) and first incidences of antisocial behaviors (suspension, arrest, carrying a gun, attacking someone and belonging to a gang). Possible responses to these questions range from age 10 to age 17 or the student can respond to the question with Never. The average age figures are based on only on those students who responded to the question with an answer other than Never.

# 6 DRUG-FREE COMMUNITIES SUPPORT PROGRAM CORE MEASURES

The Drug-Free Communities Support Program, administered by the Center for Substance Abuse Prevention, requests specific data which is typically referred to as the Core Measures. The drug categories measured are tobacco, alcohol and marijuana and the table is broken down by grade level. For each drug, and at each grade level, the percentage of students who responded positively to the question and the number of students who responded to the question are reported. For *Age of Onset*, the average age of first use for those students who reported using is reported.

- **Past 30-Day Use** The question *On how many occasions have you used ... in the past 30 days?* is used to measure this statistic by reporting the percentage of students who report any use in the past 30 days.
- **Perception of Risk** The question *How much do you think people risk harming themselves if they ...?* is used to measure this statistic by reporting the percentage of students who report that using the drug is a *Moderate Risk* or a *Great Risk* to their health.
- **Perception of Parental Disapproval** The question *How wrong do your parents feel it would be for you to ...?* is used to measure this statistic by reporting the percentage of students who report that parents would feel it is *Wrong* or *Very Wrong* to use tobacco, alcohol and marijuana.
- **Age of Onset** The question *How old were you when you first...?* is used to measure this statistic. The possible responses to this question range from *10 or Under* to *17 or Older*. The table shows the average age of onset of use of those students who answered the question with a response other than *Never Used*.
