#### 1 INTRODUCTION

This report summarizes findings from the Arkansas Prevention Needs Assessment Survey (APNA), a survey of 6th, 8th, 10th and 12th grade school students, conducted in the fall of 2007. This survey was available free of charge to all Arkansas public school districts that chose to participate. The survey was designed to assess adolescent substance use and related behaviors, and risk and protective factors that predict these behaviors. In this report, the results are presented for each grade along with the overall results for the State. Table 1 contains characteristics of the students who completed the survey.

Table 1: Characteristics of Participants

The APNA Survey was first administered in the fall of 2002 and has been administered in the fall of each school year since then. Because trends over time are very important to prevention planning, readers are encouraged to review the results from the previous surveys. By comparing the results of the previous surveys, changes in ATOD (alcohol, tobacco and other drugs) use and rates of ASB (antisocial behavior), levels of risk and protective factors can be determined for a specific grade. It is important to note that the results in this report are for students who were not sampled in the even grades (6, 8, 10, and 12) during the previous years' survey. Those students are now in grades 7, 9, 11 or are out of school. gether, the results of the current and past APNA surveys provide a complete picture of ATOD use, antisocial behavior, risk, and protection for students in

(Methods Note Regarding Long-Term Trend Data:) The 2006 procedures varied from those used in this report, as

well as those used in the 2005 and earlier reports. Non-standard procedures for calculating: 1) drug prevalence rates, and 2) for calculating scores on the risk and protective factor questions, were used in the 2006 report. The variation in 2006 procedures related to how missing data (i.e., instances where the student did not respond to a question) were counted. The effect of the 2006 procedure was to slightly reduce the reported prevalence levels for all drugs, and to lower the calculated scores for the risk and protective factor questions.

In this report, the computational methods used for all calculations are identical to those used in the 2005 (and prior) reports. In addition, to produce the most accurate long-term trend data possible, 2006 results have been recalculated using standard procedures consistent with all reporting years. This means that, in some cases, small deviations in 2006 data points will be noted between this report and the previous 2006 report.

#### 1.1 The Risk and Protective Factor Model of Prevention

Risk and protective factor-focused prevention is based on a simple premise: To prevent a problem from happening, we need to identify the factors that increase the risk of that problem developing and then find ways to reduce the risks. Just as medical researchers have found risk factors for heart attacks such as diets high in fats, lack of exercise, and smoking, a team of researchers, the Social Development Research Group (SDRG), at the University of Washington

have defined a set of risk factors for drug abuse. The research team also found that some children exposed to multiple risk factors manage to avoid behavior problems later even though they were exposed to the same risks as children who exhibited behavior problems. Based on research, they identified protective factors and processes that work together to buffer children from the effects of high risk exposure and lead to the development of healthy behaviors.

Risk factors include characteristics of school, community, and family environments, as well as characteristics of students and their peer groups that are known to predict increased likelihood of drug use, delinquency, and violent behaviors among youth (Hawkins, Catalano & Miller, 1992; Hawkins, Arthur & Catalano, 1995; Brewer, Hawkins, Catalano & Neckerman, 1995).

#### 2 TOOLS FOR ASSESSMENT AND PLANNING

Protective factors exert a positive influence or buffer against the negative influence of risk, thus reducing the likelihood that adolescents will engage in problem behaviors. Protective factors identified through research reviewed by the Social Development Research Group include social bonding to family, school, community and peers; and healthy beliefs and clear standards for behavior.

Research on risk and protective factors has important implications for prevention efforts. The premise of this approach is that in order to promote positive youth development and prevent problem behaviors, it is necessary to address those factors that predict the problem. By measuring risk and protective factors in a population, specific risk factors that are elevated and widespread can be identified and targeted by preventive interventions that also promote related protective factors. For example, if academic failure is identified as an elevated risk factor in a community, then mentoring and tutoring interventions can be provided that will improve academic performance, and also increase opportunities and rewards for classroom participation.

Risk and protective factor-focused drug abuse prevention is based on the work of J. David Hawkins, Ph.D., Richard F. Catalano, Ph.D.; and a team of researchers at the University of Washington in Seattle. Beginning in the early 1980's, the group researched adolescent problem

behaviors and identified risk factors for adolescent drug abuse and delinquency. The chart above shows the links between the 16 risk factors and the five problem behaviors. The check marks have been placed in the chart to indicate where at least two well designed, published research studies have shown a link between the risk factor and the problem behavior.

#### 3 SCHOOL IMPROVEMENT USING SURVEY DATA

Data from the Arkansas Prevention Needs Assessment Survey can be used to help school and community planners assess current conditions and prioritize areas of greatest need.

Each risk and protective factor can be linked to specific types of interventions that have been shown to be effective in either reducing the risk(s) and enhancing the protection(s). The steps outlined below will help your school and community make key decisions regarding allocation of resources, how and when to address specific needs, and which strategies are most effective and known to produce results.

#### What are the numbers telling you?

Review the charts and data tables presented in this report. Using the table on the next page, note your findings as you discuss the following questions

- Which 3 to 5 risk factors appear to be higher than you would want?
- Which 3 to 5 protective factors appear to be lower than you would want?
- Which levels of 30 day drug use are increasing and/or unacceptably high?
  - Which substances are your students using the most?
  - At which grades do you see unacceptable usage levels?
- Which levels of antisocial behaviors are increasing and/or unacceptably high?
  - Which behaviors are your students exhibiting the most?
  - At which grades do you see unacceptable behavior levels?

#### How to decide if a rate is "unacceptable."

- Look across the charts to determine which items stand out as either much higher or much lower than the others.
- Compare your data to statewide data and national data. Differences of 5% or more between the local and other data should be carefully reviewed.
- Determine the standards and values held in your area. For example: Is it acceptable in your community for 75% of high school students to drink alcohol regularly even when the statewide percentage is 90?

#### Use these data for planning:

- Substance use and antisocial behavior data raise awareness about the problems and promote dialogue.
- Risk and protective factor data identify exactly where the community needs to take action.
- Promising approaches talk with resources listed on the last page of this report for ideas about programs
  that have been proven effective in addressing the risk factors that are high in your area, and in improving the
  protective factors that are low.

	Unacceptable	Unacceptable	Unacceptable	Unacceptable
Measure	Rate #1	Rate #2	Rate #3	Rate #4
30 day drug use				
Antisocial behavior				
Risk factors				
Protective factors				

#### How do I decide which intervention(s) to employ?

- Strategies should be selected based on the risk factors that are high in your community and the protective factors
  that are low.
- Strategies should be age appropriate and employed prior to the onset of the problem behavior.
- Strategies chosen should address more than a single risk and protective factor.
- No single strategy offers the solution.

#### How do I know whether or not the intervention was effective?

Participation in the annual administration of the survey provides trend data necessary for determining the
effectiveness of the implemented intervention(s) and also provides data for determining any new efforts that are
needed.

#### 4 HOW TO READ THE CHARTS

- 1. Student responses for risk and protective factors, substance use and antisocial behavior questions are displayed by grade on the following pages.
- 2. The factors are grouped into 4 domains: community, family, peer-individual, and school.
- 3. The bars represent the percent of students in the grade who reported elevated risk or protection, substance use, antisocial behaviors or school safety concerns.
- 4. Scanning across these charts, you can easily determine which factors are most (or least) prevalent, thus identifying which are the most important for your community to address.
- 5. Bars will be complemented by a small dot. The dot shows the comparison from the state and provides additional information for you in determining the relative importance of each risk or protective factor.
- 6. A dashed line on each risk and protective factor chart represents the percentage of youth at risk or with protection for the seven state sample upon which the cut-points were developed. The seven states included in the norm group were Colorado, Illinois, Kansas, Maine, Oregon, Utah and Washington. This gives you a comparison to a national sample.
- 7. Brief definitions of the risk and protective factors can be found following the graphs.
- 8. Actual percentages are provided in the data tables following the charts.

Table 3: Risk and Protective Factor Scale Definition

Table 3: Risk and Protective Factor Scale Definition  Community Domain Risk Factors									
Community and Danson al									
Community and Personal	Neighborhoods with high rates of residential mobility have been shown to have higher rates of								
Transitions & Mobility	juvenile crime and drug selling, while children who experience frequent residential moves and								
stressful life transitions have been shown to have higher risk for school failure, delinquency, and									
~	drug use.  Community  Research has shown that neighborhoods with high population density lack of natural surveillance								
Community	Research has shown that neighborhoods with high population density, lack of natural surveillance								
Disorganization	of public places, physical deterioration, and high rates of adult crime also have higher rates of								
	juvenile crime and drug selling.								
Low Neighborhood	A low level of bonding to the neighborhood is related to higher levels of juvenile crime and drug								
Attachment	selling.								
Laws and Norms	Research has shown that legal restrictions on alcohol and tobacco use, such as raising the legal								
Favorable Toward	drinking age, restricting smoking in public places, and increased taxation have been followed by								
Drug Use	decreases in consumption. Moreover, national surveys of high school seniors have shown that shifts								
	in normative attitudes toward drug use have preceded changes in prevalence of use.								
Perceived Availability of	The availability of cigarettes, alcohol, marijuana, and other illegal drugs has been related to the								
Drugs and Handguns	use of these substances by adolescents. The availability of handguns is also related to a higher risk								
	of crime and substance use by adolescents.								
	Community Domain Protective Factors								
Opportunities for	When opportunities are available in a community for positive participation, children are less likely								
Positive Involvement	to engage in substance use and other problem behaviors.								
Rewards for Positive	Rewards for positive participation in activities help children bond to the community, thus lowering								
Involvement	their risk for substance use.								
	Family Domain Risk Factors								
Family History of	When children are raised in a family with a history of problem behaviors (e.g., violence or ATOD								
Antisocial Behavior	use), the children are more likely to engage in these behaviors.								
Family Conflict	Children raised in families high in conflict, whether or not the child is directly involved in the								
	conflict, appear at risk for both delinquency and drug use.								
Parental Attitudes	In families where parents use illegal drugs, are heavy users of alcohol, or are tolerant of children's								
Favorable Toward	use, children are more likely to become drug abusers during adolescence. The risk is further								
Antisocial Behavior &	increased if parents involve children in their own drug (or alcohol) using behavior, for example,								
Drugs	asking the child to light the parent's cigarette or get the parent a beer from the refrigerator.								
Poor Family	Parents' use of inconsistent and/or unusually harsh or severe punishment with their children								
Management	places them at higher risk for substance use and other problem behaviors. Also, parents' failure								
	to provide clear expectations and to monitor their children's behavior makes it more likely that								
	they will engage in drug abuse whether or not there are family drug problems								
Family Domain Protective Factors									
Family Attachment	Young people who feel that they are a valued part of their family are less likely to engage in								
	substance use and other problem behaviors.								
Opportunities for	Young people who are exposed to more opportunities to participate meaningfully in the respon-								
Positive Involvement	sibilities and activities of the family are less likely to engage in drug use and other problem								
	behaviors.								
Rewards for Positive	When parents, siblings, and other family members praise, encourage, and attend to things done								
Involvement	well by their child, children are less likely to engage in substance use and problem behaviors.								
School Domain Risk Factors									
Academic Failure	Beginning in the late elementary grades (grades 4-6) academic failure increases the risk of both								
	drug abuse and delinquency. It appears that the experience of failure itself, for whatever reasons,								
	increases the risk of problem behaviors.								
Low Commitment	Surveys of high school seniors have shown that the use of hallucinogens, cocaine, heroin, stimulants,								
to School	and sedatives or non-medically prescribed tranquilizers is significantly lower among students who								
to School	and sedatives or non-medically prescribed tranquilizers is significantly lower among students who expect to attend college than among those who do not. Factors such as liking school, spending

Drug Use antisocial behavior their attitudes often shift toward greater accentance of these behaviors. Y	ge in
anonocial behavior, onen accidence onten anni toward greater acceptance of these behaviors.	outh
who express positive attitudes toward drug use and antisocial behavior are more likely to en	
in a variety of problem behaviors, including drug use.	0.0.
Friends' Use of Drugs  Young people who associate with peers who engage in alcohol or substance abuse are much	more
likely to engage in the same behavior. Peer drug use has consistently been found to be as	
the strongest predictors of substance use among youth. Even when young people come from	
managed families and do not experience other risk factors, spending time with friends wh	
drugs greatly increases the risk of that problem developing.	, abc
Interaction with Young people who associate with peers who engage in problem behaviors are at higher ris	k for
Antisocial Peers engaging in antisocial behavior themselves.	101
Perceived Risk of Young people who do not perceive drug use to be risky are far more likely to engage in drug	1100
Drug Use	use.
Rewards for Young people who receive rewards for their antisocial behavior are at higher risk for eng	
Antisocial Behavior further in antisocial behavior and substance use.	ıgıng
Rebelliousness Young people who do not feel part of society, are not bound by rules, don't believe in trying	to bo
successful or responsible, or who take an active rebellious stance toward society, are at highe	
of abusing drugs. In addition, high tolerance for deviance, a strong need for independence	
normlessness have all been linked with drug use.	and
Sensation Seeking  Young people who seek out opportunities for dangerous, risky behavior in general are at h	ighon
risk for participating in drug use and other problem behaviors.	gner
Intention to Use ATODs   Many prevention programs focus on reducing the intention of participants to use ATODs lat	er in
life. Reduction of intention to use ATODs often follows successful prevention interventions.	
Depressive Symptoms Young people who are depressed are overrepresented in the criminal justice system and are	
likely to use drugs. Survey research and other studies have shown a link between depression	and
other youth problem behaviors.	
Gang Involvement Youth who belong to gangs are more at risk for antisocial behavior and drug use.	
Peer-Individual Protective Factors	
Religiosity Young people who regularly attend religious services are less likely to engage in problem behavior	
Social Skills Young people who are socially competent and engage in positive interpersonal relations with	their
peers are less likely to use drugs and engage in other problem behaviors.	
Belief in the Moral Order Young people who have a belief in what is "right" or "wrong" are less likely to use drugs.	
Opportunities for Participation in positive school and community activities helps provide protection for youth	
Prosocial Involvement	
Rewards for Young people who are rewarded for working hard in school and volunteering in the communit	y are
Prosocial Involvement less likely to engage in problem behavior.	
	from
Interaction with Young people who associate with peers who engage in prosocial behavior are more protected

# 5 DRUG-FREE COMMUNITIES SUPPORT PROGRAM CORE MEASURES

The Drug-Free Communities Support Program, administered by the Center for Substance Abuse Prevention, requests specific data which is typically referred to as the Core Measures. The drug categories measured are tobacco, alcohol and marijuana and the table is broken down by grade level. A *Combined* drug category has been created for all of these areas.

Past 30-Day Use The question On how many occasions have you used ... in the past 30 days? is used to measure this statistic by reporting the percentage of students who report using 1-2 times or more often.

**Perception of Risk** The question *How much do you think people risk harming themselves if they ...?* is used to measure this statistic by reporting the percentage of students who report that using the drug is a *Moderate Risk* or a *Great Risk* to their health.

**Perception of Disapproval** The question *How wrong do your parents feel it would be for you to ...?* is used to measure this statistic by reporting the percentage of students who report that parents would feel it is *Wrong* or *Very Wrong* to use tobacco, alcohol and marijuana.

Age of Onset The question How old were you when you first...? is used to measure this statistic. The possible responses to this question range from 10 or Under to 17 or Older. The table shows the average age of onset of use of those students who answered the question with a response other than Never Used.

Table 17: Core Measures by Grade

	Grade 6		Grade 8		Grade 10		Grade 12		Combined	
	n	pct	n	pct	n	pct	n	pct	n	pct
Past 30 Day Use
